Principles of Economics

Chapter 7:

Consumers, Producers, and the Efficiency of Markets

| 2021/10/15 | Efficiency and Welfare | Joseph Tao-yi Wang |

In This Chapter

- ▸ What is consumer surplus? How is it related to the demand curve?
- ▸ What is producer surplus? How is it related to the supply curve?
- ▸ Do markets produce a desirable allocation of resources? Or could the market outcome be improved upon?

| 2021/10/15 | Efficiency and Welfare | Joseph Tao-yi Wang |

Welfare Economics

▸ Allocation of resources refers to:

  ▸ How much of each good is produced
  ▸ Which producers produce it
  ▸ Which consumers consume it

▸ Welfare economics studies how the allocation of resources affects economic well-being

  ▸ Conclusion: The equilibrium of supply and demand maximizes the total benefits received by all buyers and sellers combined.

Consumer Surplus

▸ Willingness to pay, **WTP**

  ▸ Maximum amount the buyer will pay for that good
  ▸ How much the buyer values the good

▸ Consumer surplus, $CS = WTP - P$

  ▸ Amount a buyer is willing to pay minus the amount the buyer actually pays
  ▸ Benefits buyers receive from participating in a market.

Exampkle 1A: Willingness to Pay

You work at the local store that sells refurbished iPads. The store is running a sale on the refurbished iPad mini 5.

Each of your roommates wants to buy an iPad mini 5. Their willingness to pay is given in the table below.

Name	WTP
Alexis	$15,000
Kelly	10,500
Quinn	18,000
Jamir	7,500

Q: If the sale price is $12,000, who will buy an iPad, and what is the quantity demanded?

---

slido

If the sale price is $12,000, who will buy an iPad?
(Could be more than one)

ⓘ Start presenting to display the poll results on this slide.

slido

If the sale price is $12,000, what is the quantity demanded?

ⓘ Start presenting to display the poll results on this slide.

Exampkle 1A: Willingness to Pay

You work at the local store that sells refurbished iPads. The store is running a sale on the refurbished iPad mini 5.

Each of your roommates wants to buy an iPad mini 5. Their willingness to pay is given in the table below.

Name	WTP
Alexis	$15,000
Kelly	10,500
Quinn	18,000
Jamir	7,500

Q: If the sale price is $12,000, who will buy an iPad, and what is the quantity demanded?

A: Alexis & Quinn will buy an iPad mini. Kelly & Jamir will not.

▸ Hence, $Q^d = 2$ when $P = \$12,000$

Example 1B: WTP and the Demand Curve

Derive the demand schedule:

Name	WTP
Alexis	$15,000
Kelly	10,500
Quinn	18,000
Jamir	7,500

P (price of iPad mini)	who buys	Q^d
$18,001 & up	nobody	0
15,001 − 18,000	Quinn	1
10,501 − 15,000	Alexis, Quinn	2
7,501 − 10,500	Kelly, Alexis, Quinn	3
0 − 7,500	Jamir, Kelly, Alexis, Quinn	4

Example 1C: The Demand Curve

P		Q^d
$18,001 & up		0
15,001 − 18,000		1
10,501 − 15,000		2
7,501 − 10,500		3
0 − 7,500		4

About the Staircase Shape…

P

$0

0 1 2 3 4 Q
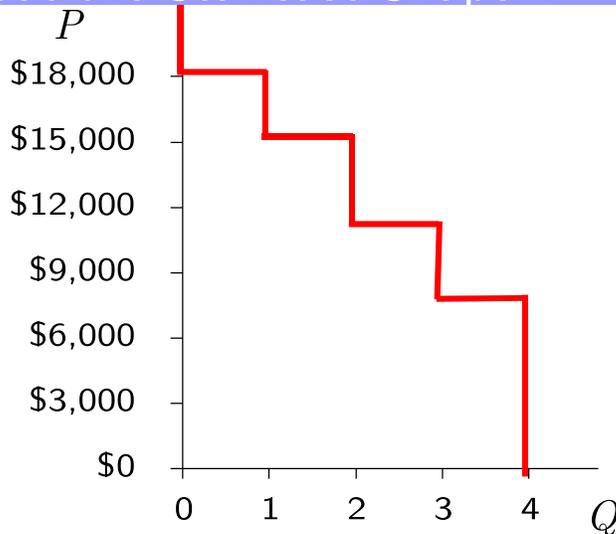

This **D** curve looks like a staircase with 4 steps – one per buyer.

▸ If there were a huge # of buyers, as in a competitive market, there would be a huge # of very tiny steps, and it would look more like a smooth curve.

2021/10/15   Efficiency and Welfare   Joseph Tao-yi Wang

Example 1C: The Demand Curve

P

$18,000
$15,000
$12,000
$9,000
$6,000
$3,000
$0

0 1 2 3 4 Q

Quinn's WTP
Alexis' WTP
Kelly's WTP
Jamir's WTP

At any **Q**, the height of the **D** curve is the WTP of the ***marginal buyer***, the buyer who would leave the market if **P** were any higher.

2021/10/15   Efficiency and Welfare   Joseph Tao-yi Wang

Example 1D: Calculating Consumer Surplus

$$CS = WTP - P$$

Name	WTP
Alexis	$15,000
Kelly	10,500
Quinn	18,000
Jamir	7,500

Suppose $P = \$15,600$.
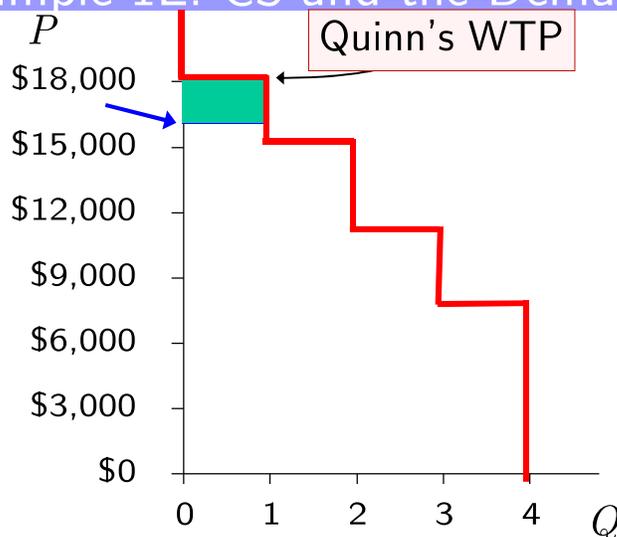

▸ Quinn's $CS =$
  ▸ $\$18,000 - 15,600 = \$2,400$.
▸ The others get no CS because they do not buy an iPad mini at this price.
▸ Total $CS = \$2,400$.

Example 1E: CS and the Demand Curve

P = $15,600

Quinn's CS = $18,000 − 15,600 = $2,400

Total CS = $2,400

Example 1E: A Lower Price Increases CS

P

$18,000

$15,000

$12,000

$9,000

$6,000

$3,000

$0

Quinn's WTP

Alexis' WTP

0   1   2   3   4 Q
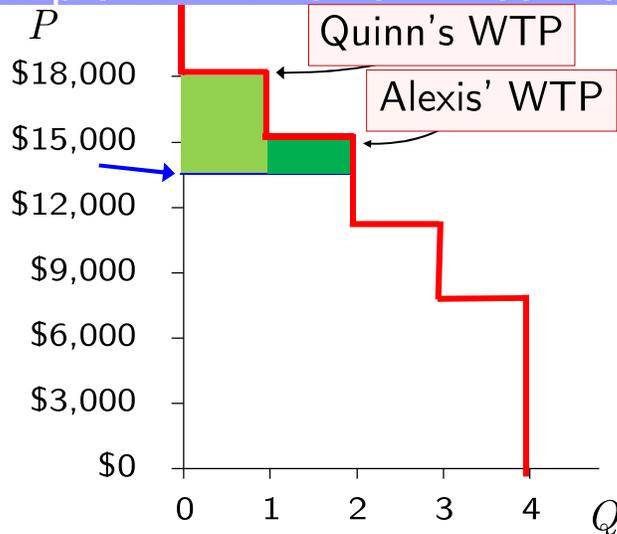

Suppose P = $13,200

Quinn's CS = $18,000 − 13,200 = $4,800

Alexis' CS = $15,000 − 13,200 = $1,800

Total CS = $6,600

Efficiency and Welfare   Joseph Tao-yi Wang
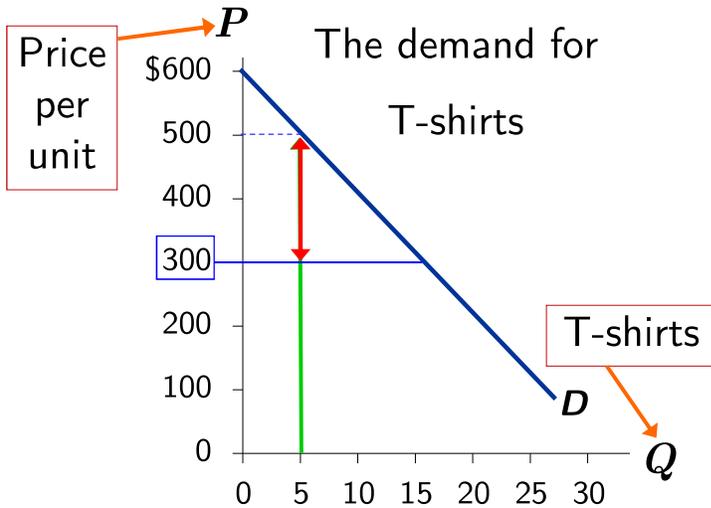

Consumer Surplus

Total Consumer Surplus

▸ The sum of the consumer surplus of all buyers in the market

▸ The area below the demand curve and above the price

  ▸ The height of the demand curve
    = the value buyers place on the good (**WTP**)

  ▸ Each buyer's **CS** = **WTP** − **P**

Efficiency and Welfare   Joseph Tao-yi Wang

Example 2: Consumer Surplus for One Buyer

Price per unit

The demand for T-shirts

P

Q

D

T-shirts

At $Q = 5$, the marginal buyer is willing to pay $500 for a T-shirt.

Suppose $P = \$300$.

Then his consumer surplus $= \$200$.

2021/10/15 — Efficiency and Welfare — Joseph Tao-yi Wang

Example 2A: Total Consumer Surplus

The demand for T-shirts

P

$P = \$300, \ Q^d = 15$

D

Q

h

CS is the area between P and the D curve, from 0 to Q.

Recall: area of a triangle equals ½ x base x height

Height $= \$600 - 300 = \underline{\$300}$.

So, $CS = ½ \times 15 \times \$300 = \underline{\$2250}$.

2021/10/15 — Efficiency and Welfare — Joseph Tao-yi Wang

9

Example 2B: A Higher Price Reduces CS

1. Fall in CS due to buyers leaving the market

2. Fall in CS due to remaining buyers paying the higher P

If **P** rises to $400,

$$CS = ½ \times 10 \times \$200 = \$1000.$$

Two reasons for the fall in **CS**.

2021/10/15   Efficiency and Welfare   Joseph Tao-yi Wang

Active Learning 1: Consumer Surplus
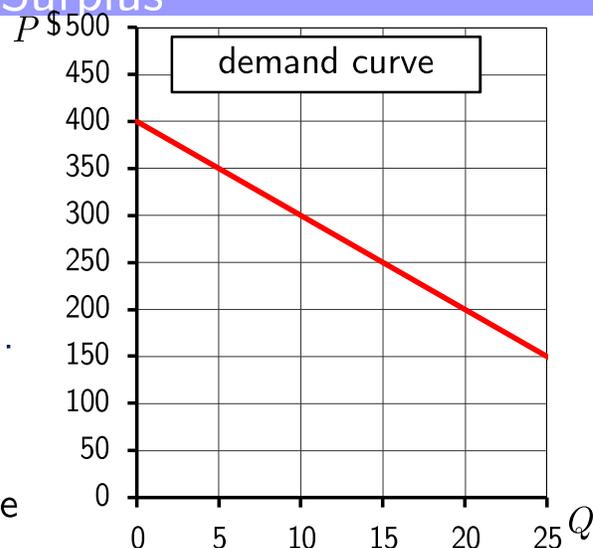

A. Find marginal buyer's WTP at Q = 10.

B. Find total CS for P = $300

Suppose P falls to $200.
How much will CS increase due to...

C. buyers entering the market

D. existing buyers paying lower price

Audience Q&A Session

ⓘ Start presenting to display the audience questions on this slide.

Producer Surplus

▸ Cost: Value of everything a seller must give up to produce a good

  ▸ Including opportunity cost

▸ Willingness to Sell, **WTS**

▸ The lowest price accepted by a seller for one unit of a good or service

  ▸ The cost is a measure of willingness to sell: produce and sell the good/service only if the price > cost

Producer Surplus

▸ Producer Surplus, $PS = P$ - cost

▸ Amount a seller is paid for a good minus the seller's cost of providing it

   ▸ Price received minus willingness to sell

▸ Measures the benefit sellers receive from participating in a market

Example 3A: Cost and Willingness to Sell

You are the lucky owner of 3 properties with identical lawns that need mowing. There are 3 lawn-mowing business in town that you can hire. The table below shows their willingness to sell:

Q: Derive the supply schedule from the cost data.

Name	cost
Chiang	$600
Chuck	1,200
Rosy	2,100

P	Q^s
$0 - 599$	0
$600 - 1,199$	1
$1,200 - 2,099$	2
$2,100$ & up	3

Example 3B: The Supply Curve

P

$2,400

$1,800

$1,200

$600

$0

0   1   2   3 Q

$1,800

$1,200

$600

$0

0   1   2   3 Q

Rosy's cost

Chuck's cost

Chiang's cost
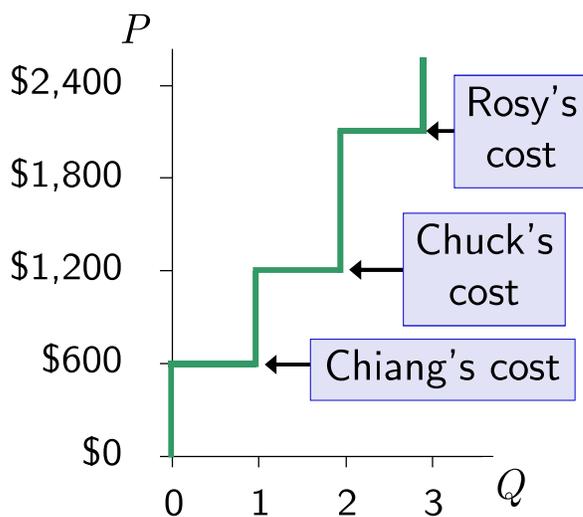

At each Q, the height of the S curve is the cost of the marginal seller, the seller who would leave the market if the price were any lower.

Efficiency and Welfare   Joseph Tao-yi Wang

16

Example 3C: Producer Surplus & the S curve

PS = P − cost

Suppose P = $1,500.

Chiang: 1,500 − 600 = $900

Chuck: 1,500 − 1,200 = $300

Rosy: $0

Total PS = $1,200

Producer Surplus
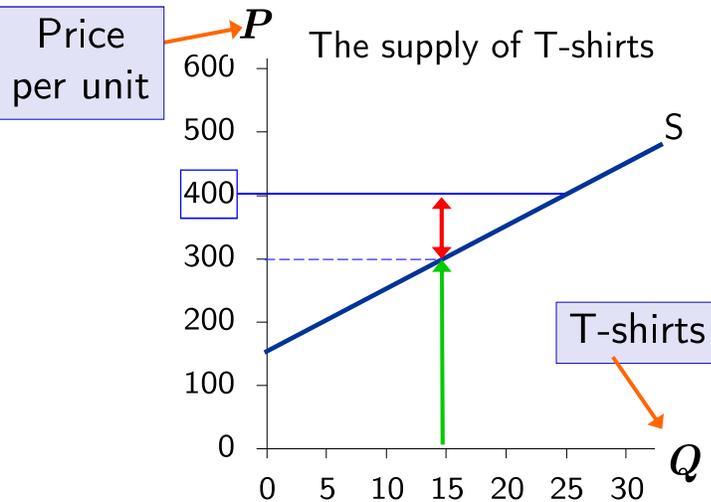

▸ Total Producer Surplus
▸ The sum of the producer surplus of all sellers in the market
▸ The area below the price and above the supply curve
  ▸ The height of the supply curve measures sellers' costs
  ▸ Each seller's $PS = P − \text{cost}$

10/15/2021

Example 4A: Producer Surplus for One Sellers

Price per unit

The supply of T-shirts

Suppose $P = \$400$.

At $Q = 15$, the marginal seller's cost is $300, and her producer surplus is $100.

T-shirts

2021/10/15   Efficiency and Welfare   Joseph Tao-yi Wang

Example 4B: Total Producer Surplus

The supply of T-shirts

PS is the area between P and the S curve, from 0 to Q.

The height of this triangle is $\$400 - 150 = \$250$.

So,
$PS = \frac{1}{2} \times b \times h$
$ = \frac{1}{2} \times 25 \times \$250$
$ = \underline{\$3125}$

2021/10/15   Efficiency and Welfare   Joseph Tao-yi Wang

The Benevolent Social Planner

▸ The benevolent social planner
  ▸ Hypothetical character: an all-knowing, all-powerful, well-intentioned dictator
▸ Wants to maximize the economic well-being of everyone in society
▸ Evaluate market outcomes
  ▸ Cares about efficiency and equality

The Benevolent Social Planner

▸ Allocation of resources – desirable?
▸ Decentralized (in a market economy)
  ▸ Determined by interactions of many self-interested buyers and sellers
▸ Total surplus – measure of society's well-being
  ▸ To consider whether the market's allocation is efficient

10/15/2021

Market Efficiency

▸ Total surplus = **CS** + **PS**

▸ Consumer Surplus =
Value to buyers – Amount paid by buyers

  ▸ Buyers' gains from participating in the market

▸ Producer Surplus =
Amount received by sellers – Cost to sellers

  ▸ Sellers' gains from participating in the market

Total surplus = Value to buyers – Cost to sellers

2021/10/15 | Efficiency and Welfare | Joseph Tao-yi Wang

Market Efficiency

▸ Efficiency

▸ The allocation of resources maximizes total surplus

  ▸ Is the pie as big as possible?

▸ Equality

▸ Distribute economic prosperity uniformly among the members of society

  ▸ Every member of society gets an equal slice of the pie?

2021/10/15 | Efficiency and Welfare | Joseph Tao-yi Wang

24

Market's Allocation of Resources

Free Market Outcomes:

1. Allocate the supply of goods to the buyers who value them most, as measured by their WTP
2. Allocate the demand for goods to the sellers who can produce them at the lowest cost
3. Produce the quantity of goods that maximizes the sum of consumer and producer surplus

   ▸ Raising or lowering the quantity of a good would not increase total surplus

Example 5: Evaluating the Market Equilibrium

Market equilibrium:

$P = \$300$

$Q = 15$

Total surplus

$= CS + PS$

Is the market equilibrium efficient?
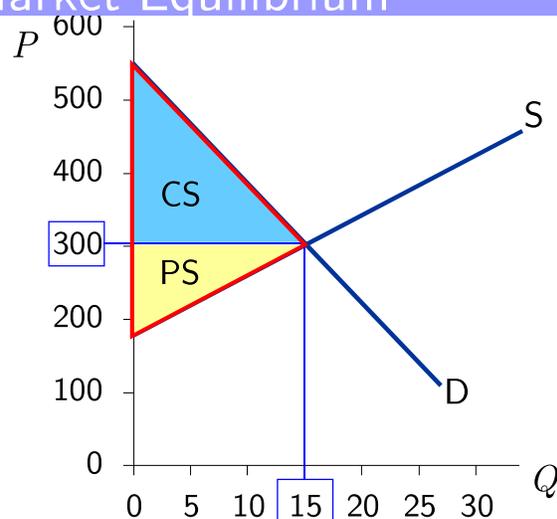

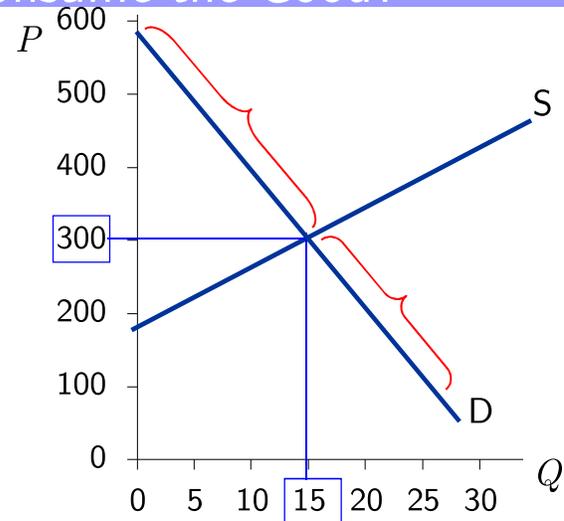

Example 5A: Which Buyers Consume the Good?

Every buyer whose **WTP** is ≥ \$300 will buy.

Every buyer whose **WTP** is < \$300 will not.

The buyers who value the good most highly are the ones who consume it.
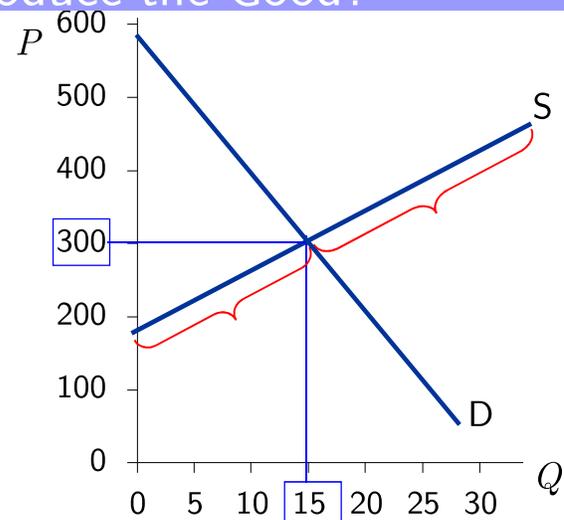

Example 5B: Which Sellers Produce the Good?

Every seller whose cost is ≤ \$300 will produce the good.

Every seller whose cost is > \$300 will not.

The sellers with the lowest cost produce the good.

26

Example 5C: Does Equilibrium Q Maximize TS?

At $Q = 20$, cost of producing the marginal unit is $350;

the value to consumers of the marginal unit is only $200

Hence, can increase total surplus by reducing Q.

This is true at any Q greater than 15.

## Example 5C: Does Equilibrium Q Maximize TS?

At $Q = 10$, cost of producing the marginal unit is $250;

the value to consumers of the marginal unit is $400

Hence, can increase total surplus by increasing Q.

This is true at any Q less than 15.

Adam Smith and the Invisible Hand
Passage from The Wealth of Nations, 1776

"It is not from the benevolence of the butcher, the brewer, or the baker that we expect our dinner, but from their regard to their own interest.

Every individual... neither intends to promote the public interest, nor knows how much he is promoting it....

He intends only his own gain, and he is in this, as in many other cases, led by an invisible hand to promote an end which was no part of his intention....

By pursuing his own interest he frequently promotes that of the society more effectually than when he really intends to promote it."

2021/10/15   Efficiency and Welfare   Joseph Tao-yi Wang

Market Efficiency and Market Failure

▸ Forces of supply and demand
  – Allocate resources efficiently
▸ Assumptions about how markets work
  1. Markets are perfectly competitive
  2. Outcome in a market matters only to the buyers and sellers in that market
  ▸ When these assumptions do not hold
    ▸ "Market equilibrium is efficient" may no longer be true

2021/10/15   Efficiency and Welfare   Joseph Tao-yi Wang

Market Efficiency and Market Failure

▸ Market failures

▸ Market power: a single buyer or seller (small group) control market prices

  ▸ Markets are inefficient

▸ Externalities: decisions of buyers and sellers affect people who are not participants in the market at all

  ▸ Inefficient equilibrium - from the standpoint of society as a whole

Winner of
THE NOBEL PRIZE IN ECONOMICS

2021/10/15   Efficiency and Welfare   Joseph Tao-yi Wang

Chapter in a Nutshell

▸ Consumer Surplus: buyers' willingness to pay for a good minus the amount they actually pay

  ▸ Measures the benefit buyers get from participating in a market

  ▸ Area below the **D** curve and above **P**

▸ Producer Surplus: amount sellers receive for their goods minus their costs of production

  ▸ Measures the benefit sellers get from participating in a market

  ▸ Area below **P** and above the **S** curve

Chapter in a Nutshell

▸ An allocation of resources that maximizes total surplus is said to be efficient

  ▸ Policymakers are concerned with the efficiency, as well as the equality, of economic outcomes.

▸ Equilibrium of **S** and **D** maximizes total surplus

  ▸ The invisible hand of the marketplace leads buyers and sellers to allocate resources efficiently.

▸ Markets do not allocate resources efficiently in the presence of market failures (market power or externalities)

Chapter 7: Efficiency and Welfare

▸ Consumer Surplus + Producer Surplus

= Total Surplus (maximized at Equilibrium)

▸ Efficiency vs. Equality

▸ Homework:

▸ Mankiw, Ch.7, Problem 6, 7, 9-11

▸ Additional Questions:

▸ True or False. If consumers buy 1,000 heads of lettuce per week, and if the price of lettuce falls by $1 per head, then the consumer surplus will increases by $1,000.

Chapter 7: Challenge Questions/ex-Midterm

▸ Old Midterm (retired):

▸ 2008 - (Multiple Choice Q6-Q7)

▸ 2010 - Essay C

▸ 2013 - (True/False Q8)

▸ 2017 - Essay B3

▸ 2018 - Essay A5

Video for Self-Study
Chapter 6: Price Control and Taxation

▸ Markets are good? Price control is bad!

▸ Taxation forms a wedge between P_b and P_s

▸ Homework:

▸ Mankiw, Ch. 6, Problem 3, 5, 7-10

▸ Additional Questions:

▸ True or False. A price ceiling on wheat would cause the price of bread to fall.

▸ True or False. iPhone 13 contain A15 CPUs made by TSMC. If Apple made its own CPUs, iPhone 13 would be cheaper.
