Elasticity

Joseph Tao-yi Wang

## In This Chapter

- ▶ What is **elasticity**?
- ▶ What kinds of issues can elasticity help us understand?
- ▶ What is the **price elasticity of demand**?
  - ▶ How is it related to the demand curve?
  - ▶ How is it related to revenue and expenditure?
- ▶ What is the **price elasticity of supply**?
  - ▶ How is it related to the supply curve?
- ▶ What are **income** and **cross-price** elasticities of demand?

2022/9/19

Elasticity

Joseph Tao-yi Wang

## Our Scenario

- ▶ You maintain the social media accounts for local businesses
  - ▶ You charge NT\$6,000 per business, and currently maintain the social media accounts for 12 businesses per year.
- ▶ Your costs are rising (including the opportunity cost of your time).
  - ▶ You consider raising the price to NT\$7,500.

2022/9/19

Elasticity

Joseph Tao-yi Wang

## Our Scenario

- ▶ The law of demand: if you raise your price, you will not have as many accounts to maintain.
  - ▶ How many fewer accounts?
  - ▶ How much will your revenue fall, or might it increase?

2022/9/19

Elasticity

Joseph Tao-yi Wang

## The Elasticity of Demand

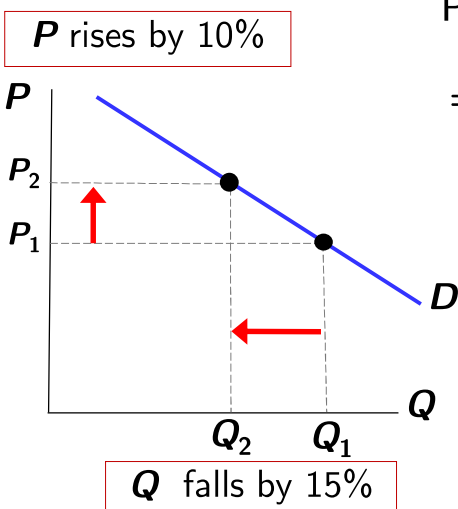

- ▶ Elasticity
  - ▶ Measure of the responsiveness of  $Q^d$  or  $Q^s$  to a change in one of its determinants
- ▶ Price Elasticity of Demand
  - ▶ How much the quantity demanded of a good responds to a change in the price of that good
    - ▶ Loosely speaking, it measures the price-sensitivity of buyers' demand
  - ▶ Actually, price elasticity IS price sensitivity!

2022/9/19

Elasticity

Joseph Tao-yi Wang

## The Price Elasticity of Demand

Price Elasticity of Demand is

$$= \frac{\text{Percentage change in } Q^d}{\text{Percentage change in } P} = \frac{15\%}{10\%} = 1.5$$

Along a D curve, P and Q move in opposite directions, which would make price elasticity negative.

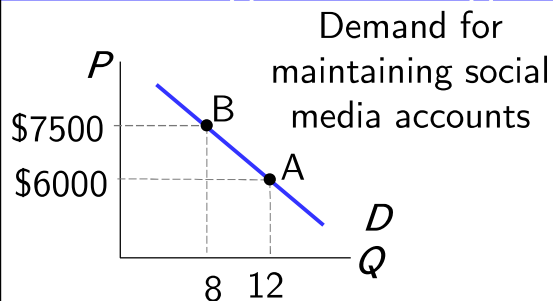

We will drop the minus sign and report all price elasticities as positive numbers (absolute values).

2022/9/19

Elasticity

Joseph Tao-yi Wang

## Calculating Percentage Changes

▶ **Going from B to A:**

- ▶ % change in P = -20%
- ▶ % change in Q = 50%

▶ Price elasticity =  $50/20 = 2.5$

Standard method of computing the percentage (%) change:

$$\frac{\text{end value} - \text{start value}}{\text{start value}} \times 100\%$$

▶ **Going from A to B:**

- ▶ the % change in P = 25%
- ▶ the % change in Q = -33%

▶ Price elasticity =  $33/25 = 1.33$

We get different values!

## The Price Elasticity of Demand

▶ Midpoint method

- ▶ The **midpoint** is the number halfway between the start and end values

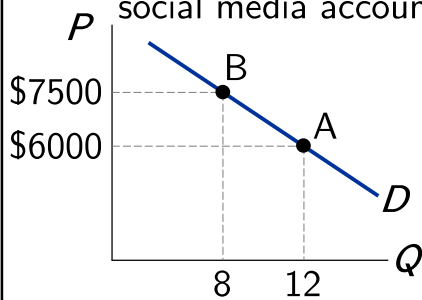

- ▶ The average of those values

▶ % change =  $\frac{\text{end value} - \text{start value}}{\text{midpoint}} \times 100\%$

▶ Price elasticity of demand = 
$$\frac{Q_2 - Q_1}{(Q_2 + Q_1)/2} \div \frac{P_2 - P_1}{(P_2 + P_1)/2}$$

## Our Scenario: Calculating Percentage Changes

Demand for maintaining social media accounts

Using the midpoint method of computing % changes:

% change in  $P =$

$$\frac{\$7,500 - \$6,000}{\$6,750} \times 100\% = 22.2\%$$

$$\% \text{ change in } Q = \frac{12 - 8}{10} \times 100\% = 40.0\%$$

$$\text{Price elasticity of demand} = 40/22.2 = 1.8$$

## Active Learning 1: Calculate an Elasticity

Use the following information to calculate the price elasticity of demand for iPhone 14 Pro:

- if  $P = \text{NT}\$34,900$ ,  $Q^d = 10,600$
  - if  $P = \text{NT}\$52,400$ ,  $Q^d = 8,400$
- A. Use the midpoint method to calculate percentage change in price
  - B. Use the midpoint method to calculate percentage change in quantity
  - C. Calculate the price elasticity of demand

## slido

If  $P = \text{NT\$}34,900$ ,  $Q^d = 10,600$

If  $P = \text{NT\$}52,400$ ,  $Q^d = 8,400$

Using the midpoint method, the percentage change in price is:

① Start presenting to display the poll results on this slide.

2022/9/19

## slido

If  $P = \text{NT\$}34,900$ ,  $Q^d = 10,600$

If  $P = \text{NT\$}52,400$ ,  $Q^d = 8,400$

Using the midpoint method, the percentage change in quantity is:

① Start presenting to display the poll results on this slide.

2022/9/19

slido

If  $P = \text{NT\$}34,900$ ,  $Q^d = 10,600$

If  $P = \text{NT\$}52,400$ ,  $Q^d = 8,400$

Using the midpoint method, the price elasticity of demand is:

① Start presenting to display the poll results on this slide.

2022/9/19

## Active Learning 1: Answers

Using the midpoint method to calculate percentage changes:

A. % change in  $P =$

$$[(\$52,400 - \$34,900)/\$43,650] \times 100 = 40.09\%$$

B. % change in  $Q^d =$

$$[(10,600 - 8,400)/9,500] \times 100 = 23.16\%$$

C. Price elasticity of demand =

$$= \% \text{ change in } Q^d / \% \text{ change in } P$$

$$= 23.16/40.09 = 0.58$$

## Determinants of Price Elasticity of Demand

We look at a series of examples comparing two common goods.

- ▶ In each example:
  - ▶ Suppose prices of both goods rise by 20%
  - ▶ Which good has the highest price elasticity of demand? Why?
  - ▶ What lesson we learn about the determinants of price elasticity of demand?

2022/9/19

Elasticity

Joseph Tao-yi Wang

slido

Example 1: Samsung S22 vs. iPhone 14 Pro  
Prices of both of these goods rise by 20%.  
For which good does  $Q^d$  drop the most?

① Start presenting to display the poll results on this slide.

2022/9/19

## Example 1: Samsung S22 vs. iPhone 14 Pro

- ▶ Prices of both goods rise by 20%.  
For which good does  $Q^d$  drop the most? Why?
- ▶ Samsung S22 has many close substitutes, so buyers can easily switch if the price rises
- ▶ iPhone 14 Pro has no close substitutes, so a price increase would not affect demand much
- ▶ Price elasticity is higher when close substitutes are available.

2022/9/19

Elasticity

Joseph Tao-yi Wang

slido

Example 2: Mountain Dew vs. Soda (Pop)  
Prices of both of these goods rise by 20%.  
For which good does  $Q^d$  drop the most?

① Start presenting to display the poll results on this slide.

2022/9/19

## Example 2: Mountain Dew vs. Soda (Pop)

- ▶ Prices of both of these goods rise by 20%.  
For which good does  $Q^d$  drop the most? Why?
- ▶ For a narrowly defined good, Mountain Dew, there are many substitutes
- ▶ There are fewer substitutes available for broadly defined goods (soda / pop)
- ▶ Price elasticity is higher for narrowly defined goods than for broadly defined ones.

2022/9/19

Elasticity

Joseph Tao-yi Wang

slido

Example 3: Insulin vs. Rolex Watches  
Prices of both of these goods rise by 20%.  
For which good does  $Q^d$  drop the most?

① Start presenting to display the poll results on this slide.

2022/9/19

### Example 3: Insulin vs. Rolex Watches

- ▶ Prices of both of these goods rise by 20%.  
For which good does  $Q^d$  drop the most? Why?
- ▶ Insulin is a necessity to diabetics. A rise in price would cause little or no decrease in quantity demanded
- ▶ A Rolex watch is a luxury. If the price rises, some people will forego it.
- ▶ Price elasticity is higher for luxuries than for necessities.

2022/9/19

Elasticity

Joseph Tao-yi Wang

slido

Example 4: Gasoline, Short Run vs. Long Run  
The price of gasoline rises 20%. Does  $Q^d$  drop more in the short run or the long run?

① Start presenting to display the poll results on this slide.

2022/9/19

## Example 4: Gasoline, Short Run vs. Long Run

- ▶ The price of gasoline rises 20%. Does  $Q^d$  drop more **in the short run or the long run?** Why?
- ▶ There's not much people can do in the short run, other than ride the bus or carpool.
- ▶ In the long run, people can buy smaller cars or live closer to work.
- ▶ **Price elasticity is higher in the long run.**

2022/9/19

Elasticity

Joseph Tao-yi Wang

## The Variety of Demand Curves

- ▶ Demand is elastic
  - ▶ Price elasticity of demand  $> 1$
- ▶ Demand is inelastic
  - ▶ Price elasticity of demand  $< 1$
- ▶ Demand has **unit** elasticity
  - ▶ Price elasticity of demand  $= 1$

2022/9/19

Elasticity

Joseph Tao-yi Wang

## The Variety of Demand Curves

- ▶ Demand is **perfectly** inelastic
  - ▶ Price elasticity of demand = 0
  - ▶ Demand curve is vertical
- ▶ Demand is **perfectly** elastic
  - ▶ Price elasticity of demand = infinity
  - ▶ Demand curve is horizontal
- ▶ The flatter the demand curve
  - ▶ The greater the price elasticity of demand

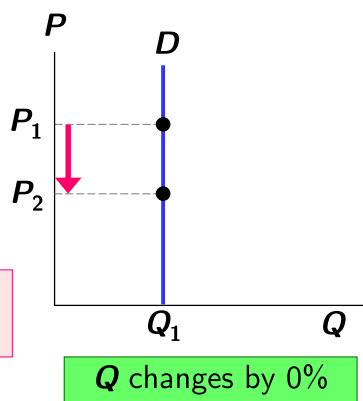

2022/9/19

Elasticity

Joseph Tao-yi Wang

## Perfectly Inelastic Demand

## Elasticity Along a Linear Demand Curve

The slope of a linear demand curve is constant, but its elasticity is not.

2022/9/19

Elasticity

Joseph Tao-yi Wang

## Our Scenario: Total Revenue

Continuing our scenario, if you raise your price from \$6,000 to \$7,500, would your revenue rise or fall?

$$\text{Total Revenue (TR)} = P \times Q$$

- ▶ A price increase has two effects on revenue:
  - ▶ Higher revenue: because of the higher  $P$
  - ▶ Lower revenue: you maintain fewer accounts (lower  $Q$ )
- ▶ Which of these two effects is bigger?
  - ▶ It depends on the price elasticity of demand

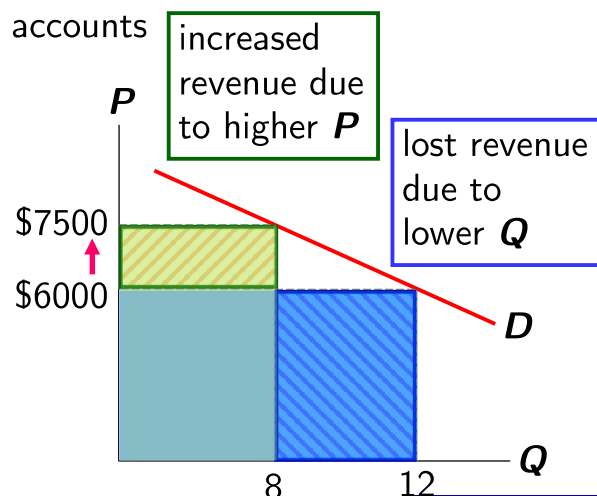

2022/9/19

Elasticity

Joseph Tao-yi Wang

## Our Scenario: Elastic Demand

Demand for maintaining social media accounts

- ▶ Price elasticity of demand = 1.8

▶ If  $P = \text{NT\$}6,000$ ,  $Q = 12$ , and  $\text{TR} = \text{NT\$}72,000$

▶ If  $P = \text{NT\$}7,500$ ,  $Q = 8$ , and  $\text{TR} = \text{NT\$}60,000$

- ▶ When  $D$  is elastic, a price increase causes revenue to fall.

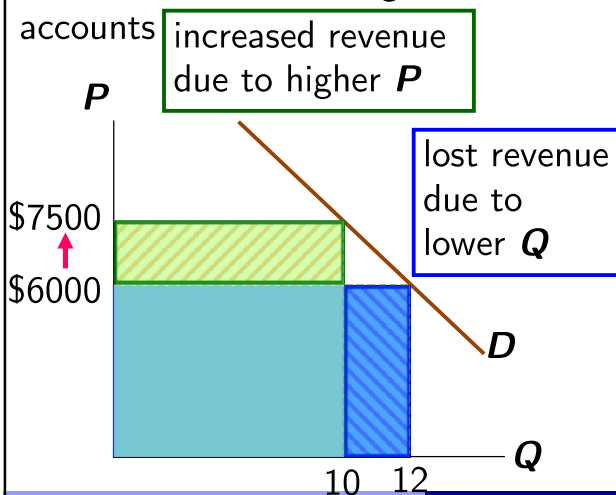

2022/9/19

Elasticity

Joseph Tao-yi Wang

## Our Scenario: Inelastic Demand

Demand for maintaining social media accounts

▶ Price elasticity of demand = 0.82

▶ If  $P = \text{NT\$}6,000$ ,  $Q = 12$ , and  $TR = \text{NT\$}72,000$

▶ If  $P = \text{NT\$}7,500$ ,  $Q = 10$ , and  $TR = \text{NT\$}75,000$

▶ When  $D$  is inelastic, a price increase causes revenue to rise.

2022/9/19

Elasticity

Joseph Tao-yi Wang

## Price Elasticity and Total Revenue

- ▶ For a price increase, if demand is elastic
  - ▶  $E > 1$ : % change in  $Q >$  % change in  $P$
  - ▶  $TR$  decreases: the fall in revenue from lower  $Q >$  the increase in revenue from higher  $P$
- ▶ For a price increase, if demand is inelastic
  - ▶  $E < 1$ : % change in  $Q <$  % change in  $P$
  - ▶  $TR$  increases: the fall in revenue from lower  $Q <$  the increase in revenue from higher  $P$

Pharmacies raise the price of insulin by 10%.  
Does total expenditure on insulin rise or fall?

① Start presenting to display the poll results on this slide.

2022/9/19

## Active Learning 2: Answers, A

- A. Pharmacies raise the price of insulin by 10%.
- ▶ Does total expenditure on insulin rise or fall?
  - ▶ Expenditure = total revenue =  $P \times Q$
  - ▶ Since demand for insulin is inelastic,  $Q$  will fall less than 10%, so expenditure rises.

2022/9/19

Elasticity

Joseph Tao-yi Wang

slido

As a result of a fare war, the price of a luxury cruise falls 20%.  
Does luxury cruise companies' total revenue rises or falls?

🕒 Start presenting to display the poll results on this slide.

2022/9/19

## Active Learning 2: Answers, B

- B. As a result of a fare war, the price of a luxury cruise falls 20%.
- ▶ Does luxury cruise companies' total revenue rises or falls?
  - ▶ Revenue =  $P \times Q$
  - ▶ The fall in  $P$  reduces revenue, but  $Q$  increases, which increases revenue. Which effect is bigger?
  - ▶ Since demand is elastic,  $Q$  will increase more than 20%, so revenue rises.

## Does Drug Interdiction

### Increase or Decrease Drug-Related Crime?

1. Increase the number of federal agents devoted to the war on drugs
  - ▶ Illegal drugs: supply curve shifts left
2. Policy of drug education
  - ▶ Reduce demand for illegal drugs
  - ▶ Left shift of demand curve

2022/9/19

Elasticity

Joseph Tao-yi Wang

## slido

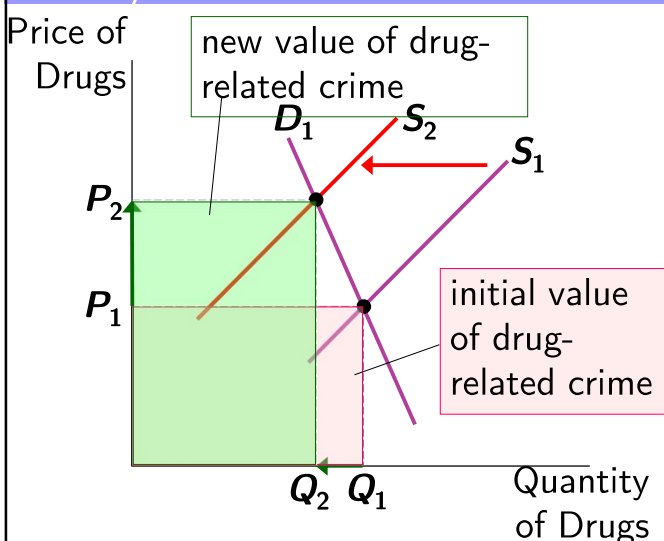

Does drug interdiction increase or decrease drug-related crime?

Policy 1: Increase the number of federal agents devoted to the war on drugs

① Start presenting to display the poll results on this slide.

2022/9/19

## Policy 1: Interdiction

Interdiction reduces the supply of drugs.

► Demand for drugs inelastic:  $P$  rises proportionally more than  $Q$  falls.

Result: an increase in total spending on drugs, and in drug-related crime.

## Does Drug Interdiction Increase or Decrease Drug-Related Crime?

1. Increase the number of federal agents devoted to the war on drugs
  - ▶ **Illegal drugs: supply curve shifts left**
    - ▶ Higher price and lower quantity
  - ▶ **Amount of drug-related crimes**
    - ▶ Inelastic demand for drugs
    - ▶ Higher drugs price: higher total revenue
    - ▶ **Increase** drug-related crime

2022/9/19

Joseph Tao-yi Wang

**slido**

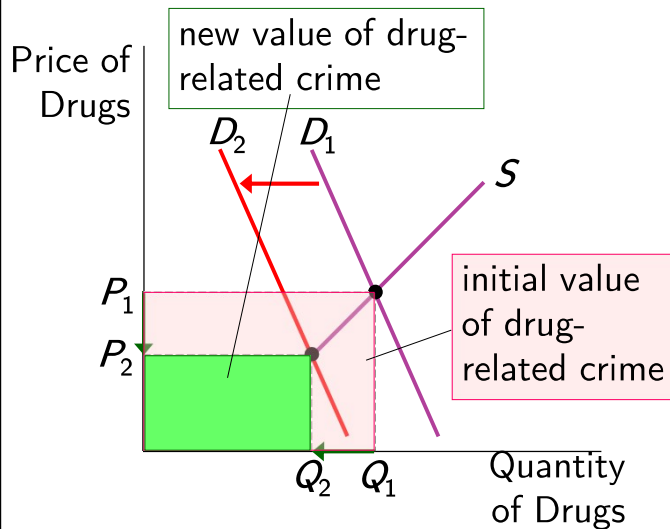

Does drug interdiction increase or decrease drug-related crime?

Policy 2: Policy of drug education

🕒 Start presenting to display the poll results on this slide.

2022/9/19

## Policy 2: Education

Education reduces the demand for drugs.

▶  $P$  and  $Q$  fall.

Result:

A decrease in total spending on drugs, and in drug-related crime.

2022/9/19

Elasticity

Joseph Tao-yi Wang

## Does Drug Interdiction

### Increase or Decrease Drug-Related Crime?

2. Policy of drug education
  - ▶ Reduce demand for illegal drugs
  - ▶ Left shift of demand curve
  - ▶ Lower quantity
  - ▶ Lower price
  - ▶ Reduce drug-related crime

2022/9/19

Elasticity

Joseph Tao-yi Wang

## Income Elasticity of Demand

- ▶ How much the quantity demanded of a good responds to a change in consumers' income
  - ▶ Percentage change in quantity demanded
  - ▶ Divided by the percentage change in income
- ▶ **Normal** goods: income elasticity  $> 0$
- ▶ **Inferior** goods: income elasticity  $< 0$

2022/9/19

Elasticity

Joseph Tao-yi Wang

## Cross-Price Elasticity of Demand

- ▶ How much the  $Q^d$  of one good responds to a change in the price of another good
  - ▶ Percentage change in  $Q^d$  of the first good
  - ▶ Divided by the percentage change in price of the second good
- ▶ **Substitutes**: cross-price elasticity  $> 0$
- ▶ **Complements**: cross-price elasticity  $< 0$

2022/9/19

Elasticity

Joseph Tao-yi Wang

## The Price Elasticity of Supply

- ▶ How much the quantity supplied of a good responds to a change in the price of that good
  - ▶ Percentage change in quantity supplied
  - ▶ Divided by the percentage change in price
- ▶ Loosely speaking, it measures **sellers'** price-sensitivity
  - ▶ Actually, price elasticity IS price sensitivity!

2022/9/19

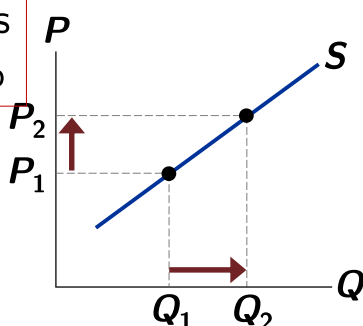

Elasticity

Joseph Tao-yi Wang

## Calculating Price Elasticity of Supply

$$\text{Price elasticity of supply} = \frac{\text{Percentage change in } Q^s}{\text{Percentage change in } P} = \frac{16\%}{8\%} = 2$$

$P$  rises  
by 8%

$Q$  rises by 16%

Again, we use the midpoint method to compute the percentage changes.

2022/9/19

Elasticity

Joseph Tao-yi Wang

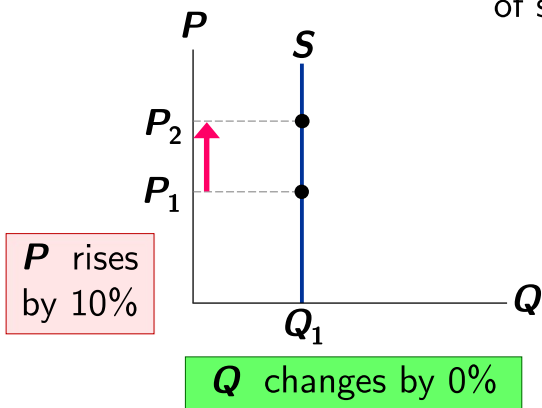

## The Variety of Supply Curves

- ▶ Supply is unit elastic
  - ▶ Price elasticity of supply = 1
- ▶ Supply is elastic
  - ▶ Price elasticity of supply > 1
- ▶ Supply is inelastic
  - ▶ Price elasticity of supply < 1

## The Variety of Supply Curves

- ▶ Supply is **perfectly** inelastic
  - ▶ Price elasticity of supply = 0
  - ▶ Supply curve is vertical
- ▶ Supply is **perfectly** elastic
  - ▶ Price elasticity of supply = infinity
  - ▶ Supply curve is horizontal
- ▶ The flatter the supply curve
  - ▶ The greater the price elasticity of supply

## Perfectly Inelastic Supply

2022/9/19

## Active Learning 3A. Residential Apartments

Residential Apartments  
(inelastic supply):

When **supply is inelastic**, an increase in demand has a bigger impact on **price** than on quantity.

## Active Learning 3B. Pork

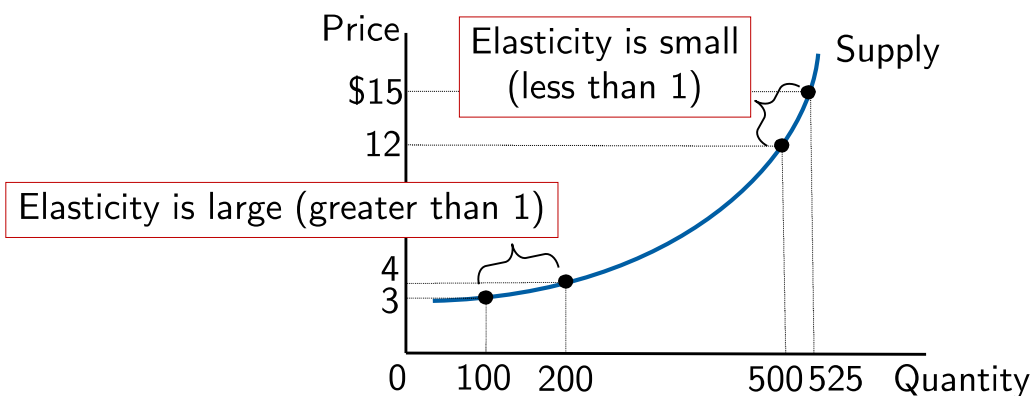

When **supply is elastic**, an increase in demand has a bigger impact on **quantity** than on price.

2022/9/19

Elasticity

Joseph Tao-yi Wang

## How the Price Elasticity of Supply Can Vary

► Supply often becomes less elastic as  $Q$  rises, due to capacity limits.

2022/9/19

Elasticity

Joseph Tao-yi Wang

## More Applications

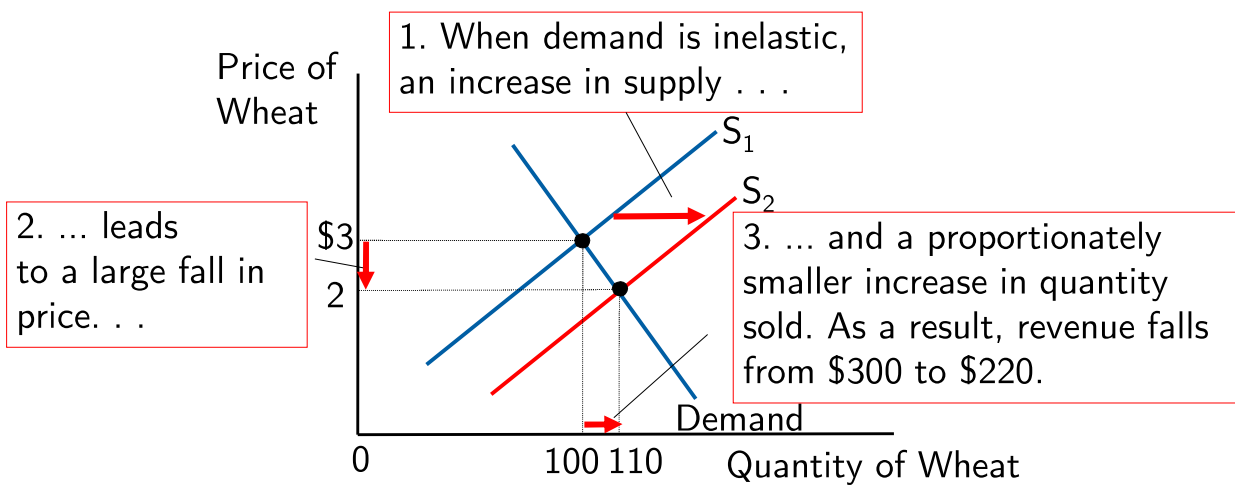

1. Can Good News for Farming Be Bad News for Farmers?
  - ▶ New hybrid of wheat: 20% production increase per acre
    - ▶ Supply curve shifts to the right
    - ▶ Higher quantity and lower price
    - ▶ Demand is inelastic: total revenue falls
    - ▶ Total profit falls if per acre cost is the same
  - ▶ Paradox of public policy: Induce farmers not to plant crops

2022/9/19

Elasticity

Joseph Tao-yi Wang

## An Increase in Supply in the Market for Wheat

2022/9/19

Government Places NT\$20 Per Pack Tax on Cigarettes in order to reduce teen smoking. After one month,  $Q^d$  of cigarettes has been reduced only slightly.  
What conclusion can you draw about the one-month demand for cigarettes?

① Start presenting to display the poll results on this slide.

## slido

You and your colleagues work for a cigarette company. Discuss the following comment from one of your colleagues, Caleb:  
"The cigarette industry should get together and raise the price of cigarettes further to increase total revenue."

① Start presenting to display the poll results on this slide.

## slido

You and your colleagues work for a cigarette company. Discuss the following comment from one of your colleagues, Keisha:  
"Only your firm should raise the price of your cigarettes to increase total revenue."

① Start presenting to display the poll results on this slide.

## Chapter in a Nutshell

- ▶ The **price elasticity of demand**
  - ▶ Measures how much the quantity demanded responds to changes in the price.
  - ▶ Is the percentage change in quantity demanded divided by the percentage change in price.
- ▶ If  $< 1$ , **inelastic** demand: quantity demanded moves proportionately less than the price
- ▶ If  $> 1$ , **elastic** demand: quantity demanded moves proportionately more than the price

Elasticity

Joseph Tao-yi Wang

## Chapter in a Nutshell

- ▶ Demand tends to be more elastic if
  - ▶ Close substitutes are available
  - ▶ The good is a luxury rather than a necessity
  - ▶ The market is narrowly defined
  - ▶ If buyers have substantial time to react to a price change.
- ▶ **Total revenue** ( $P \times Q$ ), total amount paid for a good
  - ▶ Moves in the same direction as  $P$  (inelastic  $D$ )
  - ▶ Moves in the opposite direction as  $P$  (elastic  $D$ )

Elasticity

Joseph Tao-yi Wang

## Chapter in a Nutshell

- ▶ The income elasticity of demand
  - ▶ Measures how much the quantity demanded responds to changes in consumers' income
- ▶ The cross-price elasticity of demand
  - ▶ Measures how much the quantity demanded of one good responds to changes in the price of another good
    - ▶ The tools of supply and demand can be applied to many different kinds of markets. This chapter uses them to analyze the market for wheat, for oil, and for illegal drugs.

Elasticity

Joseph Tao-yi Wang

## Chapter in a Nutshell

- ▶ The price elasticity of supply
  - ▶ Measures how much the quantity supplied responds to changes in the price.
  - ▶ Is the percentage change in quantity supplied divided by the percentage change in price
  - ▶ If  $< 1$ , **inelastic** supply: quantity supplied moves proportionately less than the price
  - ▶ If  $> 1$ , **elastic** supply: quantity supplied moves proportionately more than the price
    - Depends on the time horizon under consideration. In most markets, supply is more elastic in the long run than in the short run.

## Chapter 5: Elasticity

- ▶ Different Types of Elasticities
  - ▶ Price Elasticity
  - ▶ Income Elasticity
  - ▶ Cross Price Elasticity
- ▶ Homework:
  - ▶ Mankiw, Ch. 5, Problem 2, 7-12
- ▶ Challenge Questions/ex-Midterm
  - ▶ 2007 - Q2
  - ▶ 2008 - Part D (+ Multi-Choice Q4-Q5)
  - ▶ 2009 - Part C5-C8 (+ Multiple Choice Q10)
