

In This Chapter What market structures lie between perfect competition and monopoly, and what are their characteristics? How do monopolistically competitive firms choose price and quantity? Do they earn economic profit? How does monopolistic competition affect society's welfare? What are the social costs and benefits of advertising?

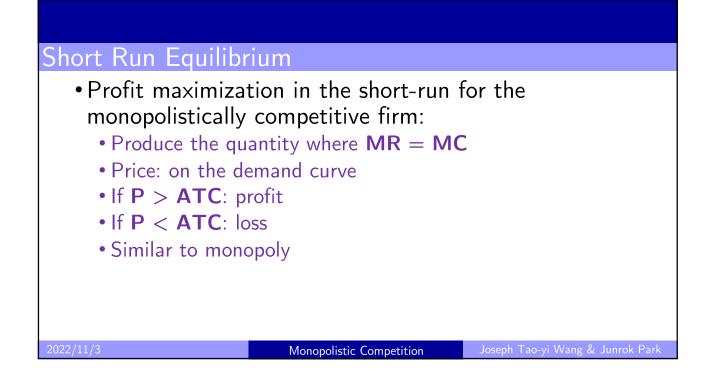

Introduction		
• Perfect Competing identical product	ms of market structu tion (perfect substitute is, price takers, $\mathbf{P} = \mathbf{M}$ ubstitute): one firm, pri): many firms, I C
 Imperfect Competition – in between the extremes: (partial substitutes) Oligopoly: only a few sellers offer similar or identical products. Monopolistic Competition: many firms sell similar but not identical products.

Advertising

- Incentive to Advertise
 - When firms sell differentiated products and charge prices above marginal cost
 - Advertise to attract more buyers
- Advertising Spending
 - Highly differentiated goods: 10-20% of revenue
 - Industrial products: little advertising
 - Homogenous products: no advertising

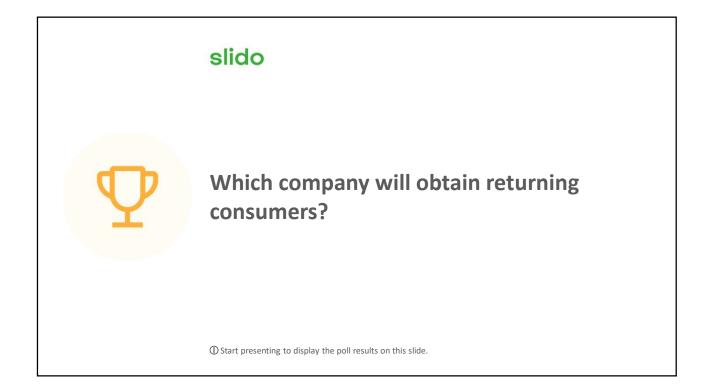

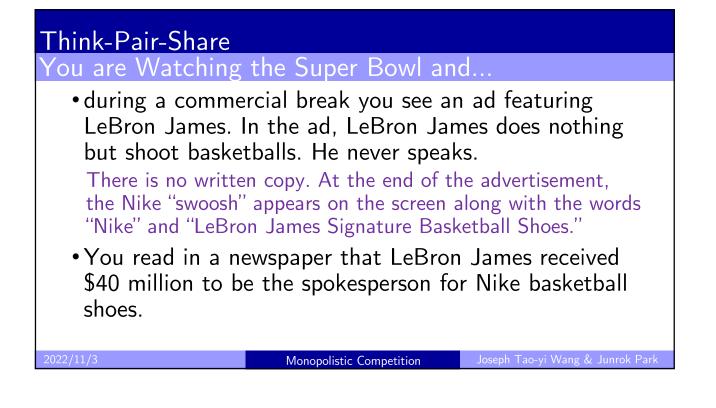

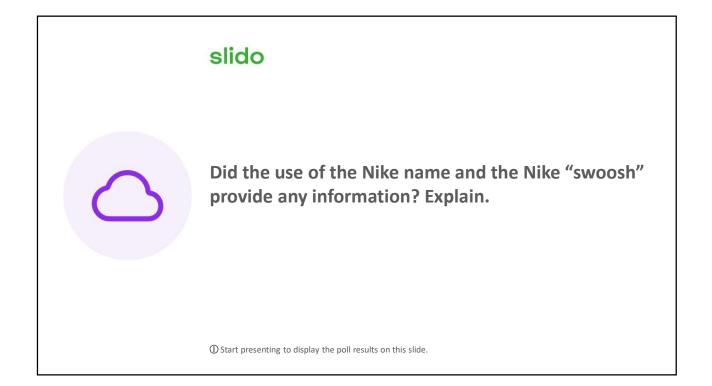

Example 3: Solutions

- If Colgate advertises, cost = NT\$240 million
 - Benefit = NT\$150×500,000 (no repeat customers)
 - Profit = \$75 million \$240 million = \$165 million
 - Do not advertise!
- If Sensodyne advertises, cost = NT\$240 million
 - Benefit = NT\$150×500,000×12 months
 - Sensodyne gets repeat customers since tastes just right
 - Profit = 900 million 240 million = 660 million
 - Advertise!

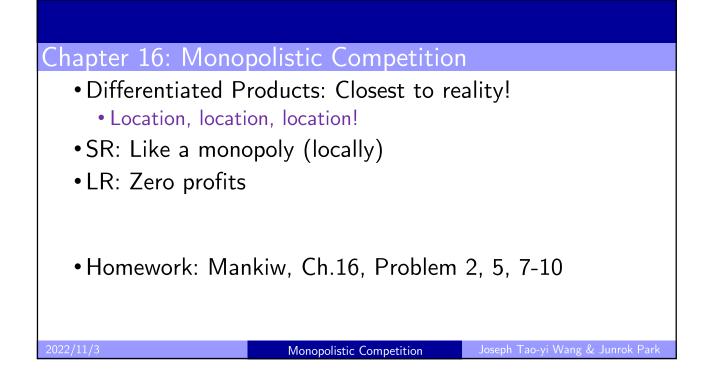

Slido While watching, a friend says, "What a waste of society's resources. I didn't learn anything about Nike basketball shoes from that ad. I think there should be government regulations requiring ads to be informative in some way." What have you learned from t
