Income

Policies to
Reduce Poverty

- A person's earnings depend on the **supply** and **demand** for that person's labor, which in turn depend on natural ability, **human capital**, compensating differentials, discrimination, and so on.
- The factors that determine wages are also largely responsible for determining how the economy's total income is **distributed** among the various members of society.

The Measurement of Inequality

Outline

The
Measurement of
Inequality

Political
Philosophy of
Redistributing
Income

Policies to
Reduce Poverty

Four questions of measurement:

- How much inequality is there in our society?
- How many people live in poverty?
- What problems arise in measuring the amount of inequality?
- How often do people move among income classes?

The Measurement of Inequality

The
Measurement of
Inequality

Political
Philosophy of
Redistributing
Income

Policies to
Reduce Poverty

Four questions of measurement:

- How much inequality is there in our society?
- How many people live in poverty?
- What problems arise in measuring the amount of inequality?
- How often do people move among income classes?

U.S. Income Inequality

- Imagine that you
 - lined up all of the **families** in the economy according to their annual income.
 - divided the families into **five** equal groups (bottom fifth, second fifth, etc.)

1 TABLE

The Distribution of Income in the United States: 2005

Group	Annual Family Income
Bottom Fifth	Under \$25,616
Second Fifth	\$25,616–\$45,021
Middle Fifth	\$45,021–\$68,304
Fourth Fifth	\$68,304–\$103,100
Top Fifth	\$103,100 and over
Top 5 percent	\$184,500 and over

Source: U.S. Bureau of the Census.

U.S. Income Inequality

- Imagine that you
 - lined up all of the **families** in the economy according to their annual income.
 - divided the families into **five** equal groups (bottom fifth, second fifth, etc.)

- computed the share of total income that each group of families received.

TABLE 2

Year	Bottom Fifth	Second Fifth	Middle Fifth	Fourth Fifth	Top Fifth	Top 5%
2005	4.0%	9.6%	15.3%	22.9%	48.1%	21.1%
2000	4.3	9.8	15.5	22.8	47.4	20.8
1990	4.6	10.8	16.6	23.8	44.3	17.4
1980	5.2	11.5	17.5	24.3	41.5	15.3
1970	5.5	12.2	17.6	23.8	40.9	15.6
1960	4.8	12.2	17.8	24.0	41.3	15.9
1950	4.5	12.0	17.4	23.4	42.7	17.3
1935	4.1	9.2	14.1	20.9	51.7	26.5

Income Inequality in the United States

This table shows the percentage of total before-tax income received by families in each fifth of the income distribution and by those families in the top 5 percent.

Source: U.S. Bureau of the Census.

- If income were equally distributed across all families, each one-fifth of families would receive one-fifth (20 percent) of total income.
- From 1935-1970, the distribution of income gradually became more equal.
- In more recent years, this trend has reversed itself.

- If income were equally distributed across all families, each one-fifth of families would receive one-fifth (20 percent) of total income.
- From 1935-1970, the distribution of income gradually became more equal.
- In more recent years, this trend has reversed itself.

Reasons for Recent Increase in Income Inequality

- The following have tended to reduce the demand for unskilled labor and raise the demand for skilled labor:
 - Increases in international trade with low-wage countries.
 - Changes in technology.
- Therefore, the wages of unskilled workers have **fallen** relative to the wages of skilled workers.
- This has resulted in increased inequality in family incomes.

Reasons for Recent Increase in Income Inequality

- The following have tended to reduce the demand for unskilled labor and raise the demand for skilled labor:
 - Increases in international trade with low-wage countries.
 - Changes in technology.
- Therefore, the wages of unskilled workers have **fallen** relative to the wages of skilled workers.
- This has resulted in increased inequality in family incomes.

Inequality around the World

- Answering this question is problematic.
- For some countries, data are not available.
- Not every country collects data in the same way. Some countries collect data on **individual incomes**, other countries collect data on **family incomes**, still others collect data on **expenditure**.

Inequality around the World

- Answering this question is problematic.
- For some countries, data are not available.
- Not every country collects data in the same way. Some countries collect data on **individual incomes**, other countries collect data on **family incomes**, still others collect data on **expenditure**.

the richest 10% relative to the poorest 10%

1 FIGURE

Inequality around the World

This figure shows a measure of inequality: the income (or expenditure) that goes to the richest 10 percent of the population divided by the income (or expenditure) that goes to the poorest 10 percent. Among these nations, Japan and Germany have the most equal distribution of economic well-being, while South Africa and Brazil have the least equal.

貧富差距或所得分配的衡量:

- 五等分位分組之下, 所得前百分之二十家庭的平均所得, 是後百分之二十家庭平均所得的幾倍?
- 吉尼係數。

貧富差距或所得分配的衡量:

- 五等分位分組之下, 所得前百分之二十家庭的平均所得, 是後百分之二十家庭平均所得的幾倍?
- 吉尼係數。

如何量到最大的貧富差距?

Outline

The
Measurement of
Inequality

Political
Philosophy of
Redistributing
Income

Policies to
Reduce Poverty

- 不要用全部資訊 (吉尼係數), 只用富人與窮人的比較。
- 如何定義富人和窮人?
 - 前 10% v.s. 後 10%。
 - 前 5% v.s. 後 5%。
 - 一千萬以上 v.s. 37 萬以下。
 - 一億以上 v.s 37 萬以下。
 - 首富 v.s 最窮的那個人。
- 所得種類:
 - 家庭所得或個人所得?
 - 總所得還是分項所得 (如薪資所得或股利所得)?

中國時報 臺灣希望2008 專題報導6: 臺灣新窮人 新貧族誕生 望錢興嘆

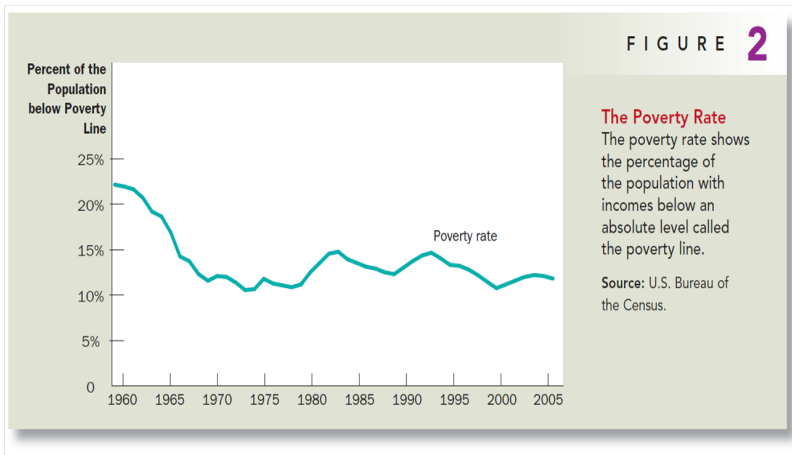

- 「據財稅資料中心截至2004年的統計, 年所得逾千萬的富豪, 平均所得2790萬元, 為貧窮家戶的**55倍**, 十年來這項差距由48倍增為55倍, 貧富差距明顯惡化。」
- 「此外, 股票造成的財富效應更是嚇人, 千萬富豪的平均股利所得高達1924萬元, 為貧窮家戶的**836倍**, 二者有如天壤之別。」

- 「... 主計處家庭收支調查, 五等分位家戶高低所得差距在2001年達到高峰, 之後幾年似乎趨於緩和, 但若以財稅資料中心統計, 全國納納稅人細分為**20等分**, 高低所得差距由1998年的**32倍**增為2003年的**51倍**, 其實貧富差距是惡化的。」

The Poverty Rate

- The **poverty rate** is the percentage of the population whose family income falls below an **absolute** level called the **poverty line**.
- The poverty line is set by the federal government at roughly **three times** the cost of providing an adequate diet.

- In 2005, the median family had an income of \$56,194, and the poverty line for a **family of four** was \$19,971.

- As economic growth pushes the entire income distribution upward, more families are pushed above the poverty line because the poverty line is an **absolute** rather than a relative standard.
- Despite continued economic growth in **average income**, the poverty rate has not declined.
- Although economic growth has raised the income of the typical family, the increase in inequality has prevented the poorest families from sharing in this greater economic prosperity.

Who Is Poor?

3 TABLE

Who Is Poor?

This table shows that the poverty rate varies greatly among different groups within the population.

Group	Poverty Rate
All persons	12.6%
White, not Hispanic	8.3
Black	24.9
Hispanic	21.8
Asian	11.1
Children (under age 18)	17.6
Elderly (over age 64)	10.1
Married-couple families	5.9
Female household, no spouse present	31.1

Source: U.S. Bureau of the Census. Data are for 2005.

Three Facts About Poverty

- Poverty is correlated with race. Blacks and Hispanics are about **three** times more likely to live in poverty than are whites.
- Poverty is correlated with age. Children are more likely than average to be member of poor families, and the elderly are less likely than average to be poor.
- Poverty is correlated with family composition. Families headed by a female adult and without a spouse present are about **five** times as likely to live in poverty as a family headed by a married couple.

- Among Black and Hispanic children in female-headed households, about **half** live in poverty.

Problems in Measuring Inequality

- Data on income distribution and the poverty rate give an **incomplete** picture of inequality in **living standards** because of the following:
 - In-kind transfers.
 - Economic life cycle.
 - Transitory versus permanent income.

In-kind transfers

- Measurements of the distribution of income and the poverty rate are based on families' **money** income.
- Transfers to the poor given in the form of goods and services rather than cash are called **in-kind transfers**.
- The failure to include in-kind transfers as part of income greatly affects the measured poverty rate.

The Economic Life Cycle

- The regular pattern of income variation over a person's life is called the life cycle.
 - A young worker has a low income at the beginning of his or her career.
 - Income rises as the worker gains maturity and experience.
 - Income peaks at about age 50.
 - Income falls sharply at retirement, around age 65.
- This normal life cycle pattern causes inequality in the distribution of annual income, but it does not necessarily represent **true inequality** in living standards.

Transitory versus Permanent Income

- Incomes vary because of random and transitory forces.
 - Acts of nature.
 - Temporary layoffs due to illness or economic conditions, etc.
 - Permanent income excludes transitory changes in income.
 - A family's ability to buy goods and services depends largely on its **permanent** income, which is its normal, or average, income.

Economic Mobility

- The movement of people among income classes is called **economic mobility**.
- Economic mobility is substantial in the U.S. economy.
- Movements up and down the income ladder can be due to:
 - Good or bad luck.
 - Hard work or laziness.
- Persistence of economic success from generation to generation.

Political Philosophy of Redistributing Income

- What should the government do about economic inequality?
 - Economic analysis alone cannot give us the answer.
 - The question is a **normative** one facing policymakers.
- Three Political Philosophies:
 - Utilitarianism
 - Liberalism
 - Libertarianism

Utilitarianism

- The founders of utilitarianism are the English philosophers **Jeremy Bentham** (1748-1832) and **John Stuart Mill** (1806-1873).
- **Utilitarianism** is the political philosophy according to which the government should choose policies to **maximize** the total **utility** of everyone in society.
- **Utility** is the level of happiness or satisfaction that a person receives from his circumstances.
- The utilitarian case for redistributing income is based on the assumption of diminishing marginal utility (邊際效用遞減).

- An extra dollar of income to a poor person provides that person with more utility than does an extra dollar to a rich person.
- This assumption, together with the goal of maximizing total utility, implies that the government should try to achieve a more **equal** distribution of income.
- However, utilitarianism rejects complete equalization of incomes because they **accept** the principle that people respond to incentives.

- When the government redistributes income through taxes, the society's income falls.
- The utilitarian government has to **balance** the gains from greater equality against the losses from distorted incentives.
- To maximize total utility, the government stops short of making society fully **egalitarian**.

Liberalism

- **Liberalism** is the political philosophy according to which the government should choose policies deemed to be **just**, as evaluated by an impartial observer behind a “**veil of ignorance**” (無知之幕).
- This view was originally developed by the philosopher **John Rawls** in his 1971 book— *A Theory of Justice*.
- How can we, the members of society, ever agree on what **justice** means?

- Imagine that before any of use is born, we all get together for a meeting to design the rules that govern society. i.e. We are sitting in an “original position” behind a **veil of ignorance**.
- Public policy should be based on the **maximin criterion**, which seeks to maximize the utility or well-being of the **worst-off** person in society.
- That is, rather than maximizing the sum of everyone’s utility, one should **maximize the minimum utility**.
- The maxmin criterion would not, however, lead to a completely egalitarian society.

- If the government promised to equalize incomes completely, people would have no incentive to work hard, and the least fortunate person would be worse off.
- This idea would allow for the consideration of the redistribution of income as a form of **social insurance**.
- However, it is not at all clear that rational people behind the veil of ignorance would truly be so **averse to risk** as to follow the maxmin criterion.

Libertarianism

- Libertarians argue that society itself earns no income— only **individual** members of society earn income.
- **Libertarianism** is the political philosophy according to which the government should **punish crimes** and **enforce voluntary agreements**, but should not redistribute income.
- Whereas utilitarians and liberals try to **judge** what amount of inequality is desirable in a society, libertarians **denies** the validity of this very question.

- The libertarian alternative to evaluating economic *outcomes* is to evaluate the *process* by which these outcomes arise.
- As long as the process determining the distribution of income is just, the resulting distribution is fair, no matter how unequal.
- Libertarians argue that *equality of opportunity* is more important than equality of income.
- The government should enforce individual rights to ensure that everyone has the *same opportunity* to use his or her talents and achieve success.

Policies to Reduce Poverty

- Minimum-wage laws
- Welfare
- Negative income tax
- In-kind transfers

Minimum-Wage Laws

- Advocates view the minimum wage as a way of helping the working poor.
- Critics view the minimum wage as hurting those it is intended to help.
- The magnitude of the effects of the minimum wage depends on the elasticity of the demand for labor.

- Advocates argue that the demand for unskilled labor is relatively inelastic, so that a high minimum wage depresses employment only slightly.
- Critics argue that labor demand is more elastic, especially in the long run when firms can adjust employment more fully.

Welfare

- The government attempts to raise the living standards of the poor through the welfare system.
- Welfare is a broad term that encompasses various government programs that supplement the incomes of the needy.
 - Temporary Assistance for Needy Families (TANF)
 - Supplemental Security Income (SSI)

Negative Income Tax

- A **negative income tax** collects tax revenue from high-income households and gives transfers to low-income households.
- High-income families would pay a tax based on their incomes.
- Low-income families would receive a subsidy—a “negative tax.”
- Poor families would receive financial assistance without having to demonstrate need.

In-Kind Transfers

- **In-kind transfers** are transfers to the poor given in the form of goods and services rather than cash.
- Food stamps and Medicaid are examples.
- Advocates of in-kind transfers argue that such transfers ensure that the poor get what they most need.
- Advocates of cash payments argue that in-kind transfers are **inefficient** and **disrespectful**.

Antipoverty Programs and Work Incentives

- Many policies aimed at helping the poor can have the **unintended effect** of discouraging the poor from escaping poverty on their own.
- An antipoverty program can affect work incentives:
 - A family needs \$15,000 to maintain a reasonable standard of living.
 - The government promises to guarantee every family a \$15,000 income.
 - Any person making under \$15,000 has no incentive to work due to the effective marginal tax rate of 100 percent.

- **Workfare** refers to a system that would require any person collecting benefits to accept a government-provided job.
- A 1996 welfare reform bill advocated providing benefits for only a **limited** period of time.

School Vouchers(教育卷)

- One aim of universal education is to shrink the gap between rich and poor. But government-**financed** education does not require government-**run** schools.
