Liver development and regeneration

1. **Inductive angiocrine signals from sinusoidal endothelium are required for liver regeneration.**
Ding, B.S., et al.
Nature, 2010. 468(7321): p. 310-5.
2. **Pregnancy restores the regenerative capacity of the aged liver via activation of an mTORC1-controlled hyperplasia/hypertrophy switch.**
Gielchinsky, Y., et al.
Genes Dev, 2010. 24(6): p. 543-8.
3. **Organogenesis and development of the liver.**
Si-Tayeb, K., F.P. Lemaigre, and S.A. Duncan.
Dev Cell, 2010. 18(2): p. 175-89.
4. **Organ reengineering through development of a transplantable recellularized liver graft using decellularized liver matrix.**
Uygun, B.E., et al.
Nat Med, 2010. 16(7): p. 814-20.
5. **MicroRNAs control hepatocyte proliferation during liver regeneration.**
Song, G., et al.,
Hepatology, 2010. 51(5): p. 1735-43.
6. **Stem and progenitor cells for liver repopulation: can we standardise the process from bench to bedside?**
Sancho-Bru, P., et al.
Gut, 2009. 58(4): p. 594-603.
