[pollyhuang@ntu.edu.tw](mailto:pollyhuang@ntu.edu.tw)

## Chapter 4

### Networking and the Internet

## Chapter 4: Networking and the Internet

- ☀ 4.1 Network Fundamentals
- ☀ 4.2 The Internet
- ☀ 4.3 The World Wide Web
- ☀ 4.4 Network Protocols
- ☀ 4.5 Security

## Two Major Concepts

- ☀ Types of networks
  - The look of the physical network
- ☀ Distributed system
  - The software system distributed over the physical network

## Network Classifications

- ☀ By the geographical area
  - Local area network (LAN)
  - Wide area network (WAN)
- ☀ By the ownership
  - Closed, or proprietary (private)
  - Open (public)

## Network Topologies

- ☀ Regular
  - Ring
  - Bus
  - Star
- ☀ Irregular

# Ring and Bus

a. Ring

b. Bus

# Star and Irregular

c. Star

d. Irregular

# The World is not Perfect

a. Ring

b. Bus

c. Star

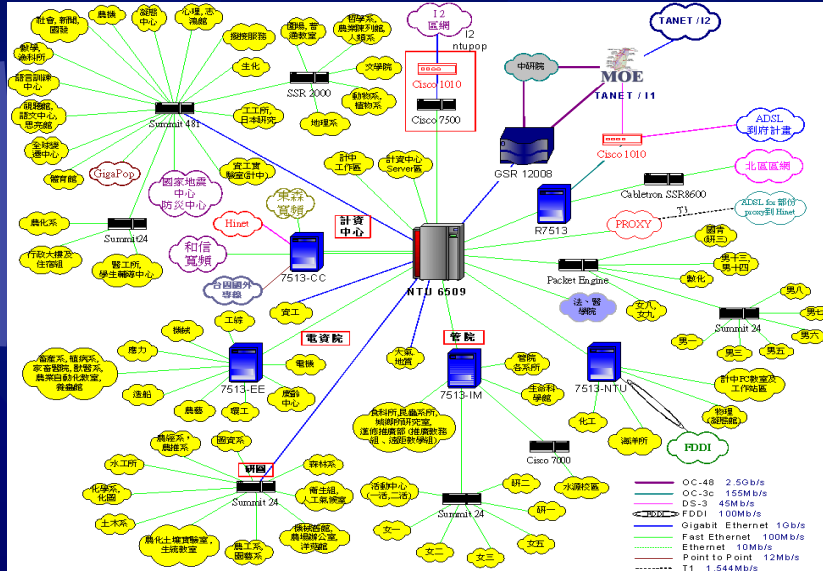

- Computers might fail
- In ring, bus, star networks, would other computers be able to communicate with one of them failing?

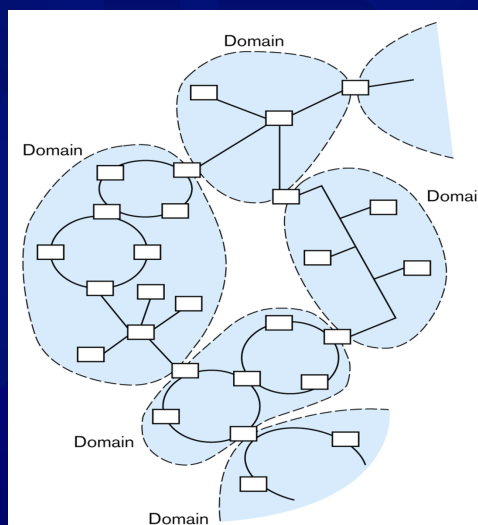

# Use of Network Topology

- LAN
  - Regular
- WAN
  - Irregular
  - A combination of the regular ones

# NTU Campus Network

# The Internet: Combination of Domains

# Connecting Networks

## ☀ Bridge

- Connects two compatible networks
- Connecting **homogeneous** domains

## ☀ Router

- Connects two incompatible networks
- Connecting **heterogeneous** domains
- Resulting “network” is called an internet

# Bridge vs. Router

a. A bridge connecting two bus networks to form one large network

b. A router connecting a bus network to a star network to form an Internet consisting of two networks

## Distributed Systems

- ☀ Software consists of parts running on different computers in a network
- ☀ A.k.a. network applications
- ☀ Example
  - Global information retrieval system such as WWW
  - Company-wide accounting and inventory systems such as online banks
  - World-wide entertainment systems such as the online games

## Inter-Process Communication

- ☀ Client-server
  - One server, many clients
  - Server must run continuously
  - Server provide information (or services)
  - Client initiates communication
- ☀ Peer-to-peer
  - Two processes communicating as equals
  - Each peer provides and request information (or services) to and from other peers
  - Both as the client and server

# Client/Server Model

# Client-Server vs. P2P

a. Server must be prepared to serve multiple clients at any time.

b. Peers communicate as equals on a one-to-one basis.

Web

BitTorrent

## Other Examples

- ☀ Propagation of knowledge
  - Teachers giving lectures
    - Client-server? peer-to-peer?
  - Students having discussions
    - Client-server? peer-to-peer?
- ☀ \$\$ loans
  - Borrowing from the banks
    - Client-server? peer-to-peer?
  - Taking a company public
    - Client-server? peer-to-peer?

## Quiz Time!

## Network Application Programming Toolkits

- ☀ IP Sockets from open source Unix
- ☀ Enterprise Java Beans from Sun Microsystems
- ☀ .NET framework from Microsoft

## Chapter 4: Networking and the Internet

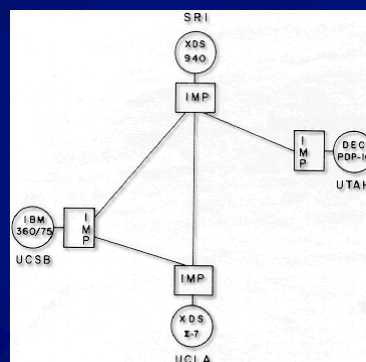

- ☀ 4.1 Network Fundamentals
- ☀ 4.2 The Internet
- ☀ 4.3 The World Wide Web
- ☀ 4.4 Network Protocols
- ☀ 4.5 Security

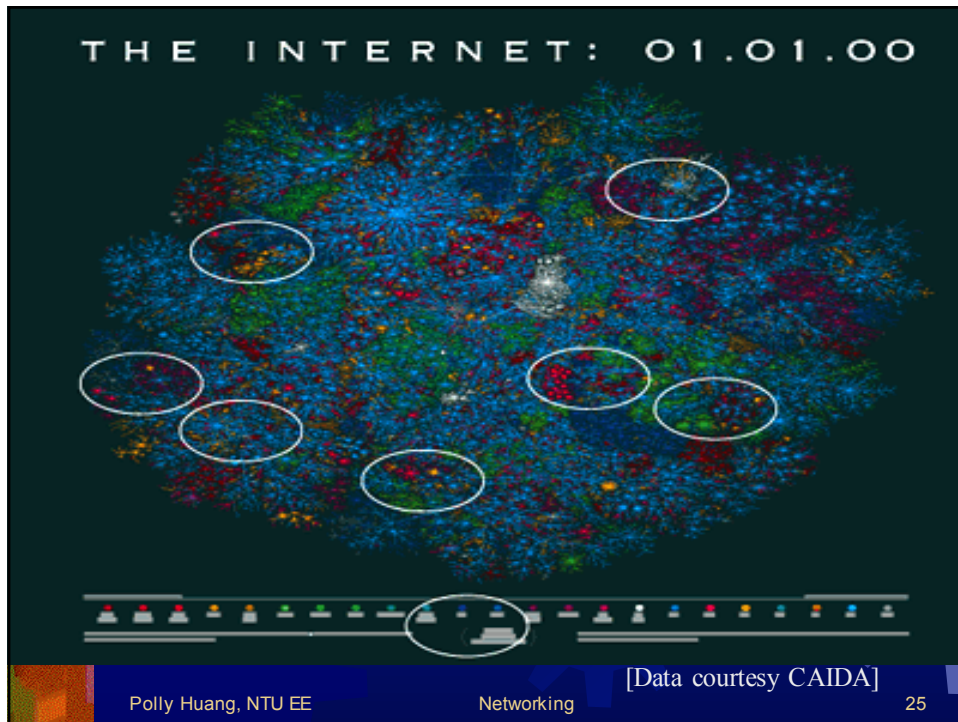

# The Internet

## ☀ The Internet

- One interconnected network spanning the world
- Started by DARPA in 1973
- Today involves millions of machines

# The Internet, Circa 1969

## Internet Architecture

- ✦ Domain
  - A network or a portion of internet controlled by one organization
- ✦ Gateway
  - Router connecting a domain to the cloud
  - Cloud meaning the rest of the internet
- ✦ Domains must be registered by their owners
  - Internet Corporation for Assigned Names & Numbers (ICANN) serves as registrar

Polly Huang, NTU EE      Networking      26

## Connecting to the Internet

Polly Huang, NTU EE

Networking

27

## Connecting Strategies

- ☀ Large organization
  - Buy a direct connection
  - oc-xx: high capacity optical fiber
- ☀ Small organization or individual
  - Link domain to the domain of an ISP
  - oc-xx, Tx: lower capacity network cables
  - ISP: Internet Service Provider
- ☀ Individual
  - Temporarily link computer into ISP's domain
  - ADSL, cable modem, modem, Ethernet, WLAN
    - Access network

Polly Huang, NTU EE

Networking

28

# IP Addresses

- ☀ 32 bit identifier for a machine
  - In two parts
- ☀ Part 1. Network identifier
  - Subnet address
  - Assigned by ICANN
- ☀ Part 2. Host address
  - Host IP address
  - Assigned by domain owner according to the subnet address

# Dotted Decimal Notation

- ☀ Standard for displaying IP addresses
- ☀ 4 numbers separated by 3 dots
- ☀ Example:
  - 192.207.177.133
- ☀ Each number can only be in between 0 to 255
  - {0~255}.{0~255}.{0~255}.{0~255}
  - 8 bits for each number
  - 32 bits network address in total

# Subnet Address

- ☀ Roughly speaking
  - Host 192.207.177.133 belonging to
  - Subnet 192.207.177.x
- ☀ Formally defined as network prefix
  - Subnet 192.207.177.0/24
- ☀ Meaning
  - Hosts in this subnet share the same first 24 bits in their IP addresses
  - There can be  $2^8$  hosts using different IP addresses in this subnet at most.

# Quiz Time!

## Classes of IP address

- ☀ Secret is in the first byte
- ☀ 1– 126, 128 –223
  - Host address (Unicast)
- ☀ 127.0.0.1
  - localhost
  - loopback
- ☀ 224 – 239
  - Group address (Multicast)
- ☀ 240 – 255
  - For emergency (not for emergency only now)

## Campus IP

- ☀ Campus FDDI core 140.112. 1.xxx
- ☀ Campus ATM core 140.112. 5.xxx
- ☀ Computing Center Servers 140.112. 2.xxx  
140.112.254.xxx
- ☀ EE Department 140.112. 17.xxx ~  
140.112. 21.xxx
- EE II 140.112. 41.xxx  
140.112. 42.128 ~  
140.112. 42.253  
( ee.ntu.edu.tw )

## Host Name

- ☀ Mnemonic (easy to remember) name
  - Example: nslab.ee.ntu.edu.tw
- ☀ Two parts
  - Domain name and machine name
- ☀ Domain name
  - Assigned by a registrar
  - Example: ee.ntu.edu.tw
- ☀ Individual machine names
  - Assigned by domain owner
  - Domain owner must run a name server

## Internet Applications

- ☀ Electronic mail (SMTP)
- ☀ File Transfer (FTP)
- ☀ Remote login (Telnet)
- ☀ World Wide Web (HTTP)

## Sending e-mails

- Step 1-3. Mail sent from Alice
  - Alice's email reader software delivers the mail to the local mail server
- Step 3-5. Mail forwarded in the network
  - Sending mail server delivers mail to the mail server of the receiver (SMTP)
- Step 5-6. Mail received by Bob
  - Bob connects to his local mail server with his email reader software.

Polly Huang, NTU EE

Networking

37

## Mail Server

- Set up by domain owner
- The after-@ part can be
  - The mail server hostname
  - The domain name if the default mail server is set by the domain owner

To: bob@ms2.ntu.edu.tw

ms2.ntu.edu.tw

bob

or

To: bob@ntu.edu.tw

Polly Huang, NTU EE

Networking

38

# File Transfer Protocol

- ☀ FTP client contacts FTP server
  - Client browses remote directory by sending commands over **control connection**.
  - When server receives a command for a file transfer, the server opens a **data connection** to client

# File Transfer

- ☀ Transfer in ASCII or BINARY forms
- ☀ Access modes
  - Restricted
    - Login with specific username and password
    - Specific access rights
  - Unrestricted
    - Anonymous FTP
    - Login as username: anonymous and password: [email address]

## Remote Login

- ☀ Remote command line window
  - Text-based
- ☀ The local client is like a
  - Network virtual terminal (NVT)
  - A keyboard and monitor

## Telnet Protocol

- ☀ Client sends command to server
- ☀ Server responds with results of the command

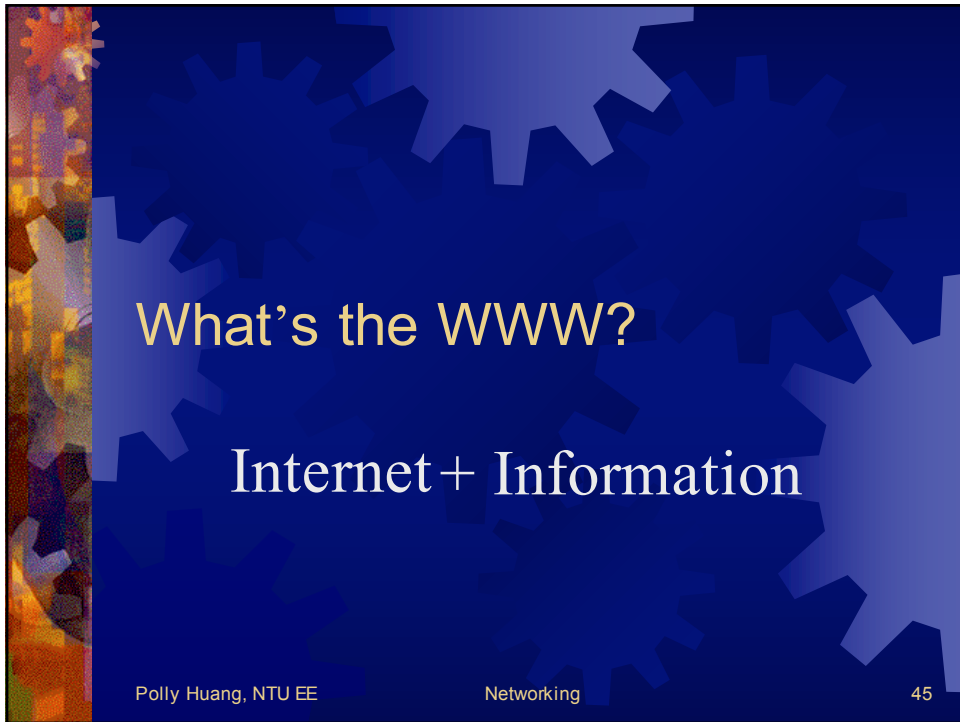

## Chapter 4: Networking and the Internet

- ☀ 4.1 Network Fundamentals
- ☀ 4.2 The Internet
- ☀ 4.3 The World Wide Web
- ☀ 4.4 Network Protocols
- ☀ 4.5 Security

A sequence of events result in the WWW today...

1989 HTML  
1991 HTTP  
1993 Mosaic

What's the WWW?  
Internet + Information

Polly Huang, NTU EE      Networking      45

This slide features a dark blue background with a pattern of interlocking gears in various shades of blue. On the left side, there is a vertical strip with a colorful, abstract, pixelated pattern. The text is centered on the slide.

**Nice-looking** Information  
Available Over the **Internet**

Polly Huang, NTU EE      Networking      46

This slide features the same dark blue background with interlocking gears and a vertical colorful strip on the left as slide 45. The text is centered, with 'Nice-looking' in yellow and 'Internet' in red.

# HTTP

- ☀ HyperText Transport Protocol
- ☀ Another application layer protocol
- ☀ A simple way to transmit data through the so-called World Wide Web

## This Simple

<http://nslab.ee.ntu.edu.tw/courses/intro-cs-spring-16/>

## Mosaic

- ☀ First point-and-click browser
- ☀ For X windows at first
- ☀ Ported to Windows and Macintosh OS's
- ☀ Now we have Netscape, Internet Explorer, Firefox, etc

## Web Browsers

- ☀ HTTP client
  - Takes URLs (Uniform Resource Locator)
    - Ex. <http://nslab.ee.ntu.edu.tw/courses/intro-cs-spring-16/>
  - Sends HTTP Requests
- ☀ HTML interpreter
  - Takes HTTP Replies (HTML files)
  - Renders nice-looking information

## Web Servers

- ☀ Disseminates hypertext documents controlled by one organization or individual
- ☀ At same internet address
- ☀ Usually in HTML containing text, images, audio, video and etc components

## The WWW flew from there.

In March of 1993, Web traffic accounts to 0.1% of all on the Internet.

More than 50% in the late 90's

## Typical URL

```
http://senterprise.aw.com/authors/Shakespeare/Julius_Caesar.html
```

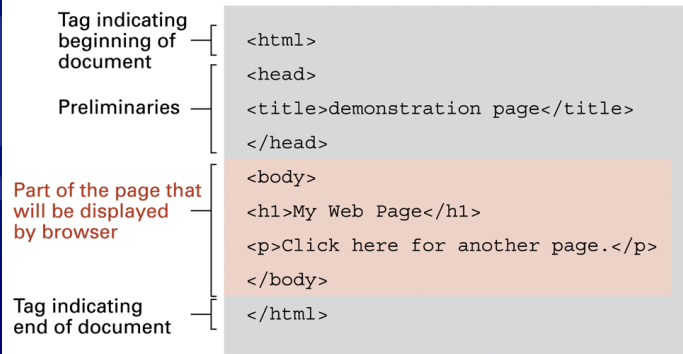

## Hypertext Document Format

- ☀ Entire document is printable characters
- ☀ Contains tags to control display
  - Display appearance
  - Links to other documents and content
  - Dynamic functions

# One Example

a. The page encoded using HTML.

# The Display

b. The page as it would appear on a computer screen.

# Enhanced Example

a. The page encoded using HTML.

```
<html>
<head>
<title>demonstration page</title>
</head>
<body>
<h1>My Web Page</h1>
<p>Click
  <a href="http://crafty.com/demo.html">
    here
  </a>
  for another page.</p>
</body>
</html>
```

Anchor tag containing parameter

Closing anchor tag

# The Display

b. The page as it would appear on a computer screen.

**My Web Page**  
Click [here](#) for another page.

# XML

- Extensible Markup Language
- Similar to HTML, but more general
- A descendant of SGML
- All sorts of display possible

# Beethoven's Fifth Symphony

```
<staff clef="treble">  
<key>C minor</key>  
<time>2/4</time>  
<measure>...</measure>  
<measure>...</measure>  
</staff>  
  
<measure>  
<rest>egth</rest>  
<notes>egth G, egth G, egth G</notes>  
</measure>  
  
<measure>  
<notes>hlf E</notes>  
</measure>
```

## Dynamic Web Pages

- ☀ Client-side
  - Computation at the client side
  - Examples: java applets, javascript, Macromedia Flash
- ☀ Server-side
  - Computation at the server side
  - Common Gateway Interface (CGI)
  - Servlets
  - PHP

## Chapter 4: Networking and the Internet

- ☀ 4.1 Network Fundamentals
- ☀ 4.2 The Internet
- ☀ 4.3 The World Wide Web
- ☀ 4.4 Network Protocols
- ☀ 4.5 Security

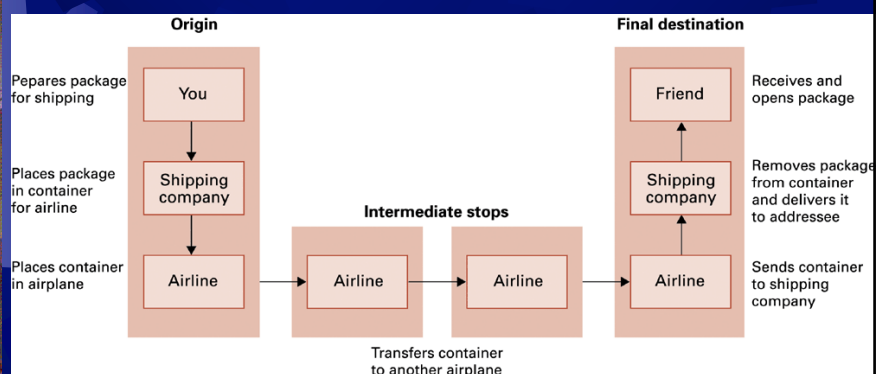

# Internet Software Layers

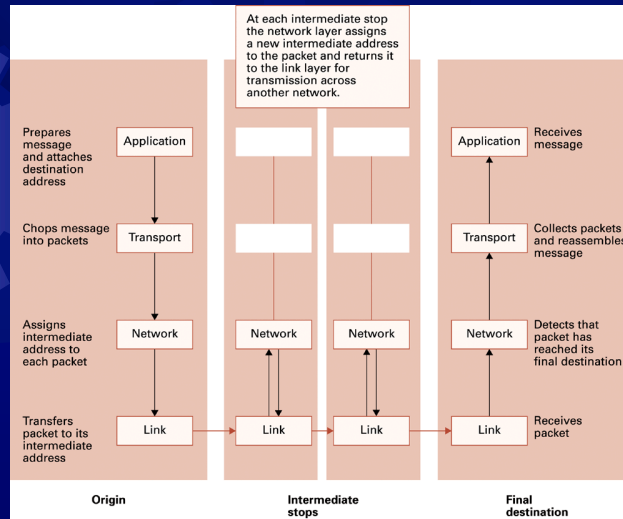

- Application layer
  - HTTP, FTP
- Transport layer
  - TCP, UDP
- Network layer
  - Routing
- Link layer
  - Token ring or Ethernet

# Package-Shipping by Air

# Message-Shipping by Internet

Polly Huang, NTU EE

Networking

67

## Link Layer

- ☀ Token ring: one-way communication around ring network
- ☀ Ethernet:
  - Uses carrier sense, multiple access with collision detection (CSMA/CD)
  - Popular for bus networks
  - Like having a conversation in a group

Polly Huang, NTU EE

Networking

68

# Quiz Time!

# Ethernet

## ☀ Port hub – bus

- Collision ←
- 100Mbps shared
- Cheap

Collision avoidance

## ☀ IP switch - star

- No collision
- 100Mbps each
- Not as cheap

## The Mechanisms

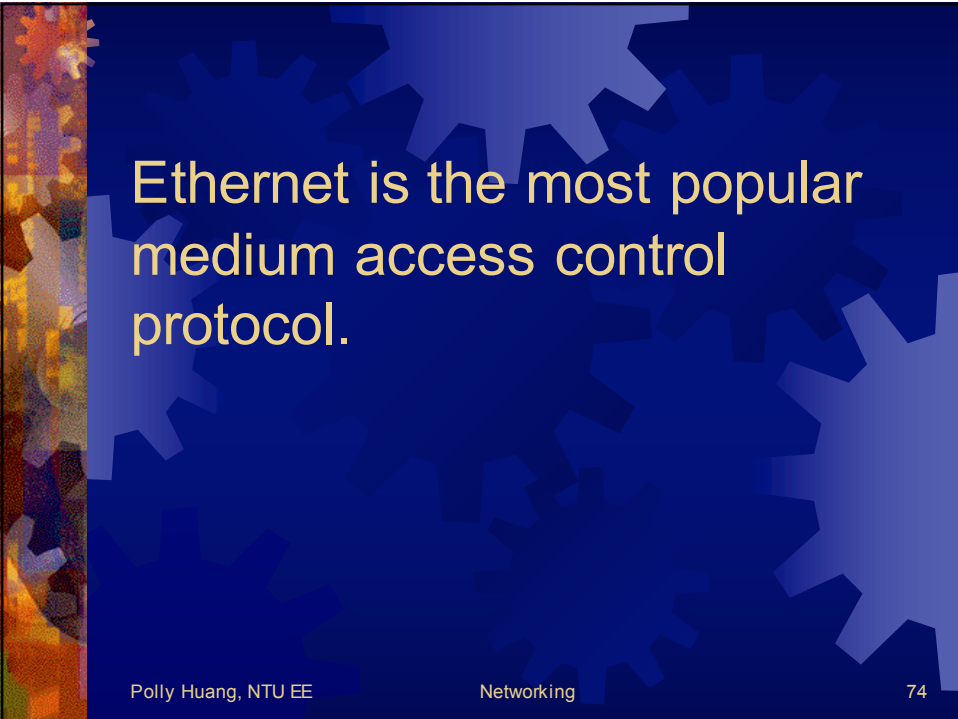

- ☀ Each computer listens on the Ethernet
  - If not sensing data on the carrier, OK to send its own data
  - If sensing data on the carrier, check whether the data is addressed for itself
- ☀ In case of simultaneous transmissions, (collisions)
  - The computer waits a random period of time before re-send

## Properties

- ☀ Simple
- ☀ Cheap
- ☀ The more computers on the LAN, the higher the chance of data colliding

**Protocol :**  
Common Rules Obeyed by All  
Parties

Ethernet is the most popular  
medium access control  
protocol.

# MAC

- ☀ **M**edium **A**ccess **C**ontrol
- ☀ The class of protocols that handle medium access problems
- ☀ Example
  - Ethernet (IEEE 802.3)
  - Wireless LAN (IEEE 802.11)
  - Bluetooth (IEEE 802.15),

# Network Layer

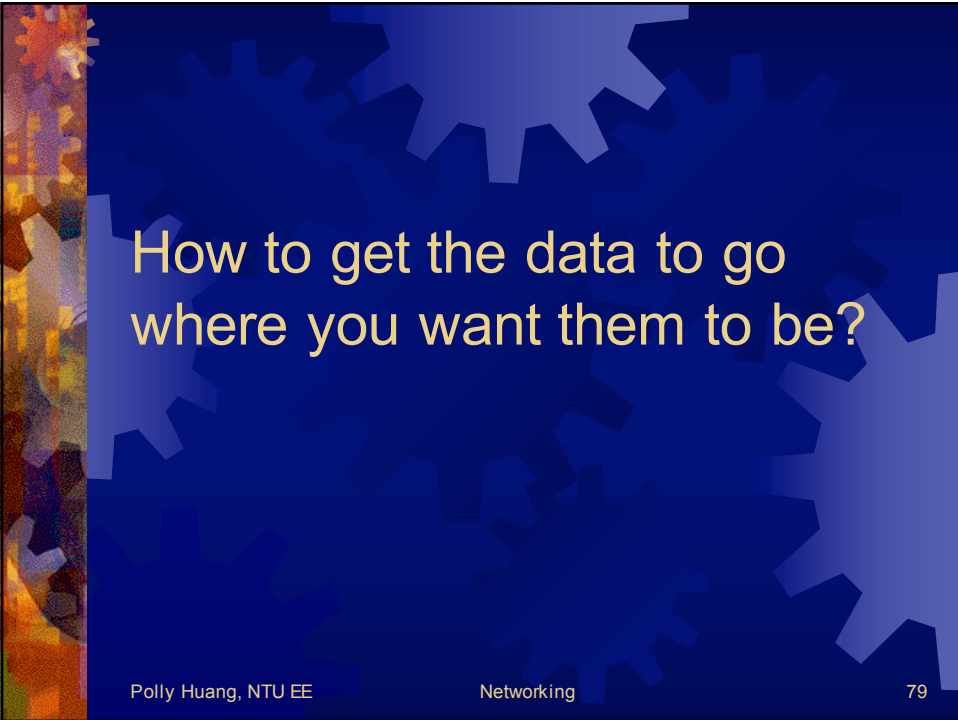

- ☀ Dealing with the bigger network
- ☀ As opposed to just a link

## WAN

- ☀ **Wide Area Network**
- ☀ A large number (usually) of connected computers spreading across a wide area
- ☀ **Connecting LANs**
  - A LAN connects to a WAN via a router
- ☀ **Irregular**

## Any Shape You Like

How to get the data to go  
where you want them to be?

## Routing

Finding a route  
from the source to the destination

# A to B

# Not That Easy....

Don't have the view of entire network

Quiz Time!

Polly Huang, NTU EE      Networking      83

I tell my neighbors.  
You tell yours

Polly Huang, NTU EE      Networking      84

# The Rules - Initial

- ☀ Determine initial table
  - Route and distance to itself and the neighbors
- ☀ Select one router to start telling its table to the neighbors

# Initial State

A tells neighbors

Destinations

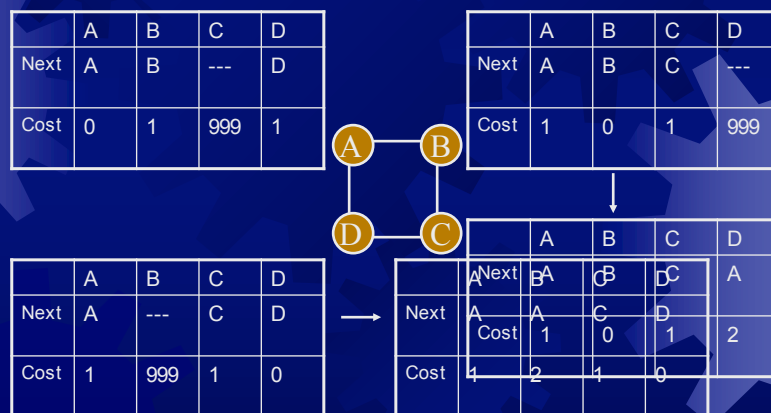

## The Rules - Propagation

- ☀ Upon receiving a table,
- ☀ Check if there exists a shorter path to any destination
- ☀ If yes, update table and tell the neighbors of the updated table
- ☀ If not, do nothing (already the shortest path table)

## A Tells the Neighbors

B tells neighbors  
D tells neighbors

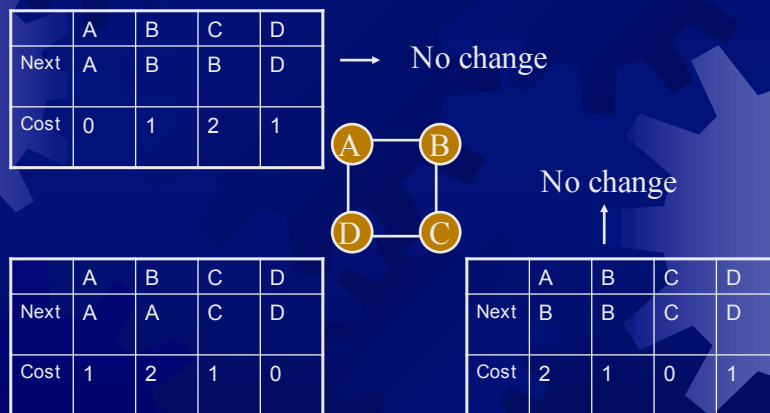

# B Tells the Neighbors

D tells neighbors  
A tells neighbors  
C tells neighbors

# D Tells the Neighbors

A tells neighbors  
C tells neighbors

→ No change

↑ No change

# A Tells the Neighbors

C tells neighbors

	A	B	C	D
Next	A	B	B	D
Cost	0	1	2	1

	A	B	C	D
Next	A	B	C	A
Cost	1	0	1	2

	A	B	C	D
Next	A	A	C	D
Cost	1	2	1	0

→ No change

↓ No change

# C Tells the Neighbors

No change ←

	A	B	C	D
Next	A	B	C	A
Cost	1	0	1	2

No change ↑

	A	B	C	D
Next	A	A	C	D
Cost	1	2	1	0

	A	B	C	D
Next	B	B	C	D
Cost	2	1	0	1

## Final State

	A	B	C	D
Next	A	B	B	D
Cost	0	1	2	1

	A	B	C	D
Next	A	B	C	A
Cost	1	0	1	2

	A	B	C	D
Next	A	A	C	D
Cost	1	2	1	0

	A	B	C	D
Next	B	B	C	D
Cost	2	1	0	1

## Distance Vector Routing

- ☀ RIP
- ☀ BGP (strictly, path vector)
- ☀ Distance Vector – the table in the example

RIP and BGP are two popular routing protocols.

## IP Routing

- ☀ Internet Protocol Routing
- ☀ The class of protocols that handle routing problems
- ☀ Example
  - RIP (IETF RFC 1058)
  - BGP (IETF RFC 1771)
  - OSPF (IETF RFC 2328)

# Internet – Structural View

Polly Huang, NTU EE

Networking

97

# Internet - Protocol View

Polly Huang, NTU EE

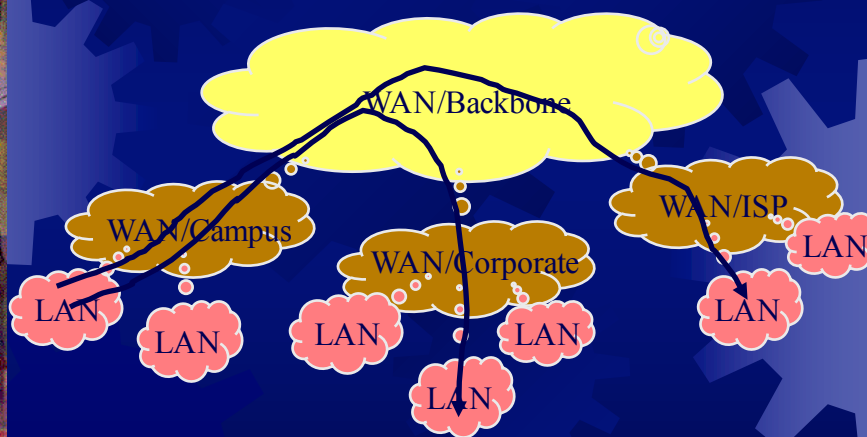

Networking

98

# Transport Layer

- ☀ Transport data through **connections**
- ☀ Additional quality of service

# Internet – Structural View

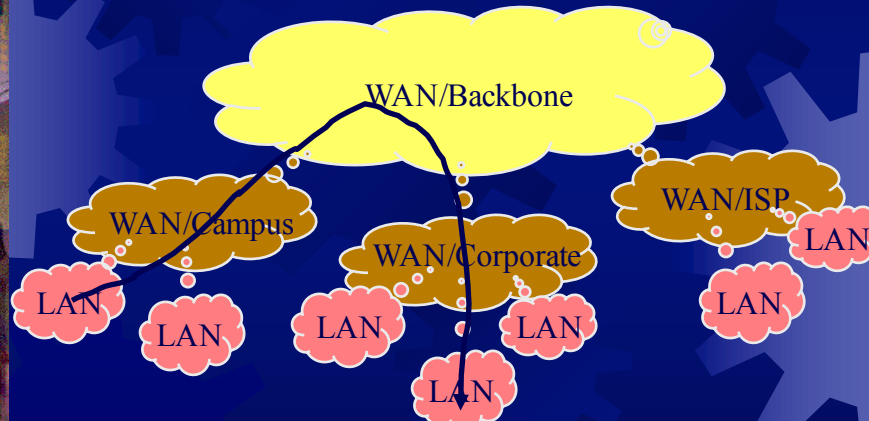

Yah, you wish...

Where Did It Go?

## False Claim

Nope, I didn't get it.  
The Internet must drop it somewhere.

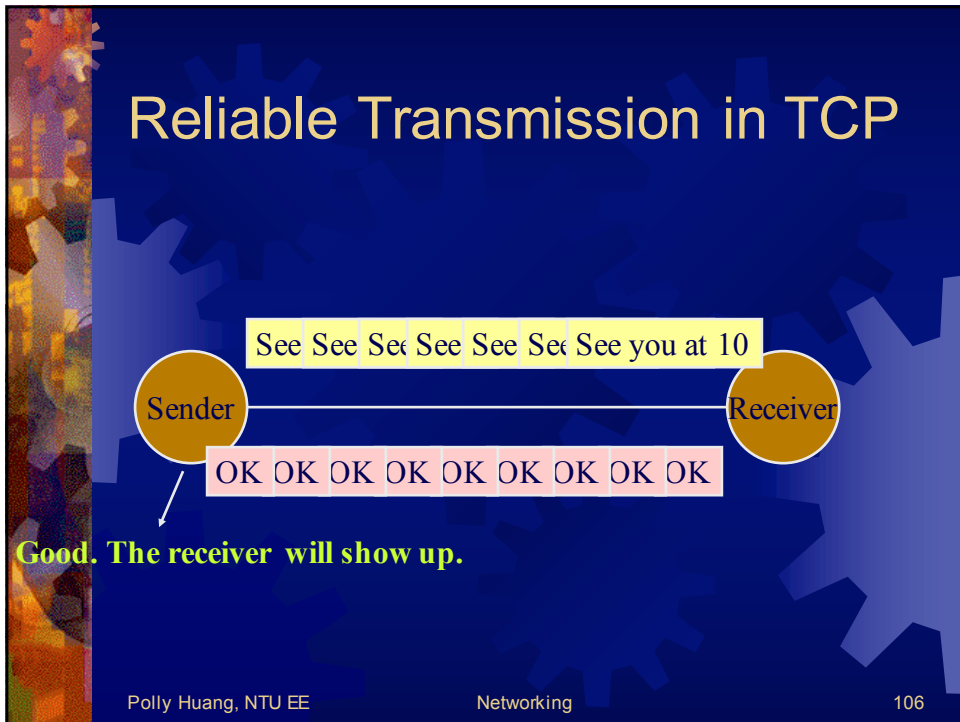

Hmm.. What can we do?

Quiz Time!

Polly Huang, NTU EE      Networking      105

This slide features a dark blue background with a pattern of interlocking gears. The text "Quiz Time!" is centered in a light yellow font. At the bottom, there are three small text elements: "Polly Huang, NTU EE", "Networking", and "105".

Reliable Transmission in TCP

See See See See See See See you at 10

Sender ————— Receiver

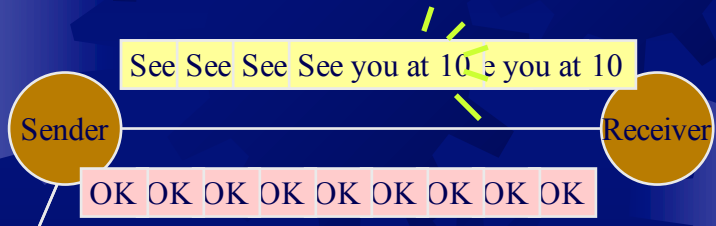

OK OK OK OK OK OK OK OK OK

Good. The receiver will show up.

Polly Huang, NTU EE      Networking      106

This slide illustrates reliable transmission in TCP. It shows a "Sender" and a "Receiver" connected by a horizontal line. Above the line, a yellow box contains the text "See See See See See See See you at 10". Below the line, a pink box contains the text "OK OK OK OK OK OK OK OK OK". A green arrow points from the text "Good. The receiver will show up." to the "Sender" label. The background is dark blue with a gear pattern. At the bottom, there are three small text elements: "Polly Huang, NTU EE", "Networking", and "106".

# In Case of Loss

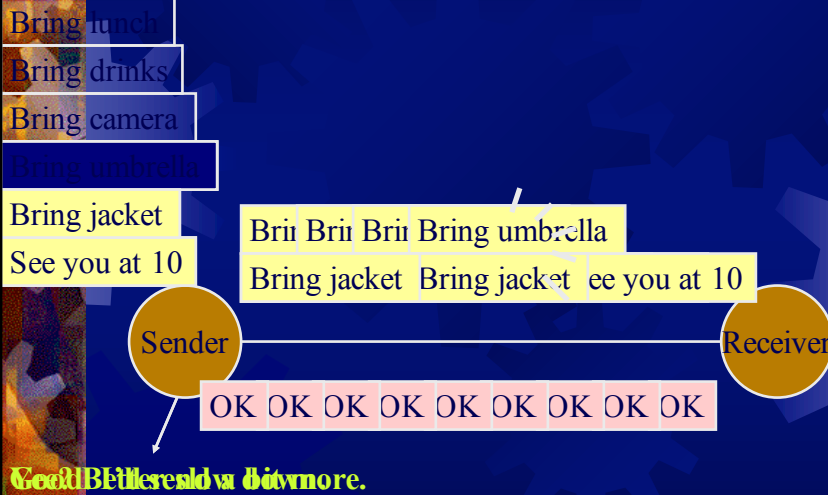

Good. The receiver will show up.

# Congestion Control in TCP

Good. It'll still send more.

# In Case of Congestion

# TCP

- Transmission Control Protocol
- Reliable transmission
  - Retransmit lost data
- Congestion control
  - Speed up when continue to receive acknowledgements
  - Slow down when experience data lost
- Enhanced registered letters

# UDP

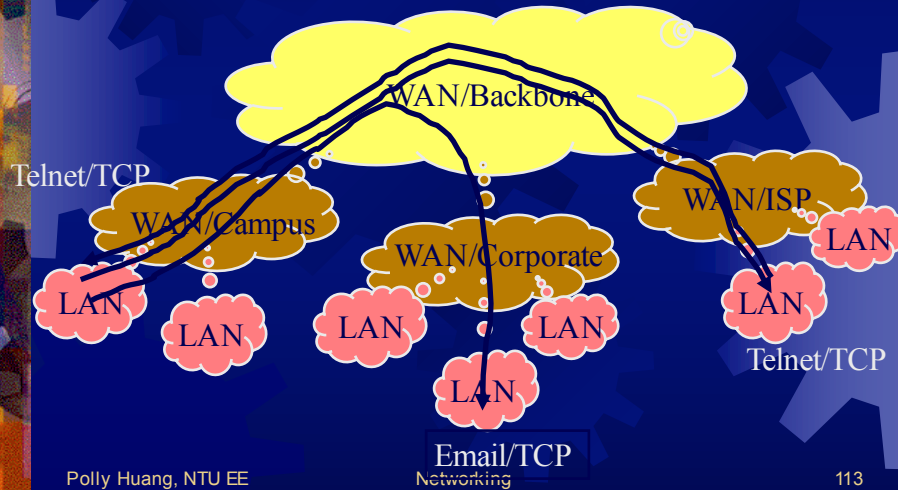

- ☀ User Datagram Protocol
- ☀ No reliable transmission
- ☀ No congestion control
- ☀ Regular letters

# TCP vs. UDP

# TCP/IP Network

Polly Huang, NTU EE

Networking

113

# TCP/IP Suite

Application Layer	• SMTP (Email), Telnet
TCP Layer	• UDP, TCP
IP Layer	• RIP/OSPF, BGP
Link Layer	• Ethernet, Wireless LAN
Physical Layer	• Twisted pair, coaxial, microwave

Polly Huang, NTU EE

Networking

114

## Chapter 4: Networking and the Internet

- ☀ 4.1 Network Fundamentals
- ☀ 4.2 The Internet
- ☀ 4.3 The World Wide Web
- ☀ 4.4 Network Protocols
- ☀ 4.5 Security

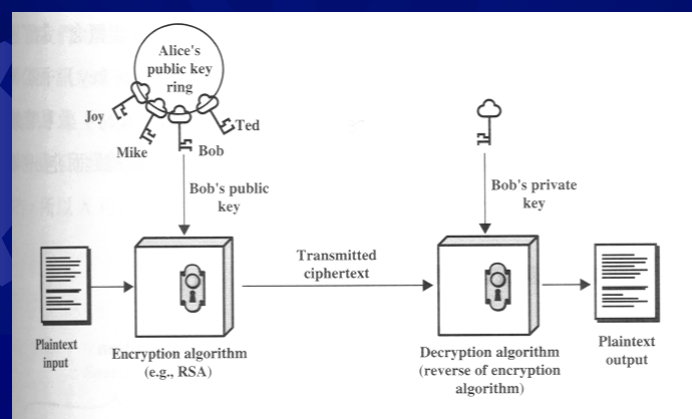

## Network Security

- ☀ Privacy of communication
  - Public-key encryption
- ☀ Integrity of machine exposed to internet
  - Attacks: the pests
  - Defense: filters and anti-pest utilities

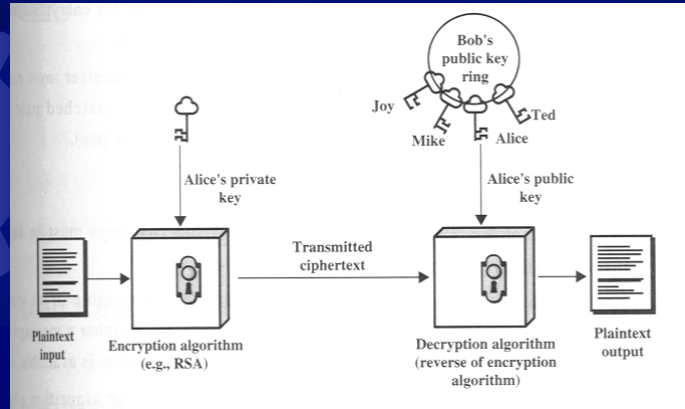

# Public-Key Encryption

- Public key is used to encode messages and is known by all people authorized to generate messages
- Private key is required to decode messages and is known by only the person who is to receive messages

# Privacy

# Authentication

# Quiz Time!

## The pests

Undesired code that might cause damage to your computer system

## Pests in 3 Major Forms

- ☀ Undesired code that might cause damage to your computer system
- ☀ Trojan horse
- ☀ Virus
- ☀ Worm

## Different Properties

- ☀ Propagation
- ☀ Spreading model
- ☀ Damage caused

## Trojan Horse

- ☀ Propagation
  - A program that **does not replicate**
- ☀ Spreading model
  - Someone emails a Trojan Horse to you
  - You copy a program with embedded Trojan Horse home
- ☀ Damage caused
  - Joke programs
  - Software of some sort that causes damage to your system.

# Virus

## ☀ Propagation

- A program or code that **replicates**
- By inserting itself or attaching itself to another program, boot sector, partition sector, or document that supports macros

## ☀ Spreading model

- Someone emails infected programs/documents to you
- You copy infected program/documents home

## ☀ Damage caused

- Most viruses only replicate
- Though, many do a large amount of damage as well.

# Worm

## ☀ Propagation

- A program that makes copies of itself
- From one disk drive to another,

## ☀ Spreading model

- Copy itself using email or another transport mechanism

## ☀ Damage caused

- Joke program
- Software of some sort that causes damage.

## Distinction

- ☀ **Trojan horse** vs. the other two
  - No self-replication
- ☀ **Virus** vs. Worm
  - Fast spreading within a system
- ☀ **Worm**
  - Fast spreading across systems
  - Most frequently seen among email threats

## Types of Email Worms

- ☀ **Worm**
  - Causing physical damage
  - Example: erasing hard disks
- ☀ **Joke**
  - Causing inconvenience
  - Example: unusual activities to display on your computer (unexpected screensaver)
- ☀ **Hoax**
  - Causing uneasy nerves
  - Example: claiming devastating, highly unlikely virus (no attachment, no reference)

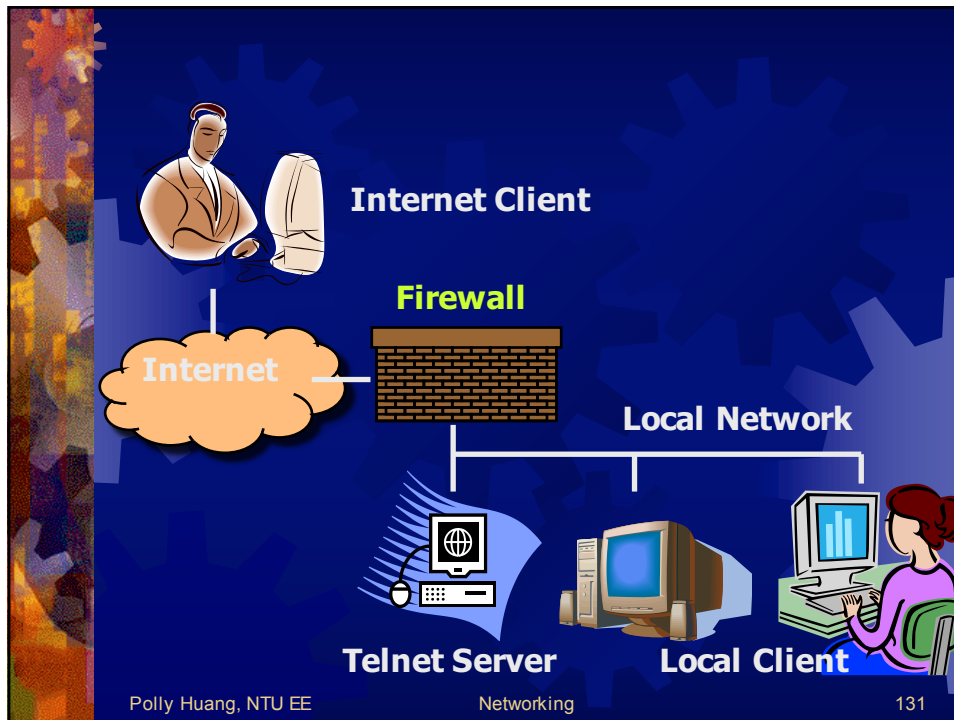

## Preventing Pests

- ☀ Avoid reading **strange** emails
  - Strange sender
  - Strange subject
  - strange attachment files
- ☀ Avoid downloading/copying files **not necessary**
  - Clicking the “No” button by default
- ☀ Avoid using **Microsoft/MacOS** software >”<
- ☀ Filters or firewall

## Firewalls

- ☀ Filter the traffic entering or passing through a machine
- ☀ Examples
  - Scan all incoming traffic and reject messages containing certain words
  - Reject all traffic from or to a given port number
  - Filter out all messages from certain IP addresses
- ☀ Placed on **gateway** or individual machines

## Recovering from Infection

- ☀ If the hard disk not damaged
  - Delete the joke or malicious program
  - Usually **not easy to clean** completely
- ☀ If the hard disk damaged
  - Hope you do have a **backup** of the data on your hard disk

Polly Huang, NTU EE      Networking      132

## Utility Software

- ☀ Deleting junk or malicious programs
  - **Anti-virus** utility programs
  - Ex. Norton, VirusScan, McAfee, etc
- ☀ Restoring from backups
  - **Backup** utility programs
  - Ex. Handy Backup, etc

Should you do something?

## Depends

- ☀ If you or your organization can afford
  - Mail filters
- ☀ Else if you do have important data on the PC
  - Both anti-virus and backup utility
- ☀ Else
  - Just anti-virus utility

## Questions?

## Telephone Network

- ☀ Telephones connected by cables
- ☀ Conversations are transmitted through cables
- ☀ Bury the cables once and then no person needs to carry letters around

## Computer Network

- ☀ Computers connected by cables
- ☀ Data are transmitted through cables
- ☀ Bury the cables once and then no person needs to carry data around

But...

How does voice or data go from one end of a cable to another end?

Polly Huang, NTU EE      Networking      139

Believe it or not!

Digital

Amplitude

Frequency

Analog

40

## Pulses or Waves

- ✦ Going through the cables
- ✦ Carrying the 0/1 information
- ✦ Called **carrier pulses** or **carrier waves**

## Going Through the Cables

- ✦ Electrical currents
- ✦ Optical waves
- ✦ EE's
  - Electronics engineering
  - Electrical-optical engineering

## Carrying 0 and 1

- ☀ Embody information in the waves
- ☀ The more, the merrier
- ☀ EE's
  - Communication engineering

## For Example

# Transmission Media

- ✦ Twisted pair
- ✦ Coaxial
- ✦ Fiber optic
- ✦ Microwave

# Twisted Pair

- ✦ Electrical waves
- ✦ Copper
- ✦ Noise
- ✦ Voice analog
- ✦ Cheap
- ✦ Example
  - Telephone

# Coaxial Cable

- Electrical pulses
- Copper
- Little noise
- Data digital
- Inexpensive
- Example
  - Cable TV
  - Ethernet cable

# Fiber Optic

- Light rays
- Fibers
- No noise
- Data digital
- Inexpensive
- Example
  - Backbone cable

# Microwave

- Microwaves
- Line of sight
- Lots of noise
- Data digital
- Expensive
- Example
  - Cellular phone, Satellite

# Satellite

## Traversing the Media

## Bandwidth

- ☀ Capacity
  - Max amount of data to be transmitted over a given time interval
- ☀ Depends on
  - Media type (microwave, twisted pair, coaxial, optical)
  - Coding of 0/1 information

## PC to Medium Interface

- ☀ Twisted pair
  - Modem, ISDN, DSL
- ☀ Coaxial
  - Cable modem, NIC
- ☀ Optical
  - ...
- ☀ Microwave
  - Cellular modem

## Modem

- ☀ For transmission over the telephone network
- ☀ Convert digital data to analog signal
- ☀ Sender side
  - Digital to analog
  - **M**odulation
- ☀ Receiver side
  - Analog to digital
  - **D**emodulation
- ☀ 56Kbps

## DSL

- ☀ **D**igital **S**ubscriber **L**ine
- ☀ For transmission over the telephone network
- ☀ Digital-analog conversion
- ☀ Sending data over multiple frequencies
- ☀ Several times faster than 56Kbps
  - provider dependant
- ☀ No one standard
  - ADSL, RADSL, etc

## ISDN

- ☀ **I**ntegrated **S**ervices **D**igital **N**etwork
- ☀ For transmission over the telephone network
- ☀ No conversion
- ☀ 128Kbps

## Cable Modem

- ✦ For transmission over cable TV network
- ✦ Digital-analog conversion
- ✦ Always on
- ✦ 10Mbps
- ✦ Users sharing cables also share bandwidth

## NIC

- ✦ **N**etwork **I**nterface **C**ard
- ✦ For transmission over the data network
- ✦ No Conversion
- ✦ 100Mbps

## Cellular Modem

- ☀ For transmission over wireless cellular network
- ☀ Analog-digital conversion
- ☀ Slower than modem

## Access Network
